Bangkok Small Community Multiple Indicator Cluster Survey 2016

Final Report

July, 2017

The Bangkok Small Community Multiple Indicator Cluster Survey (MICS) was carried out in 2016 by the National Statistical Office (NSO) in collaboration with the United Nations Children’s Fund (UNICEF) as part of the global MICS programme. Main technical and financial support was provided by the UNICEF.

The global MICS programme was developed by UNICEF in the 1990s as an international household survey programme to support countries in the collection of internationally comparable data on a wide range of indicators on the situation of children and women. MICS surveys measure key indicators that allow countries to generate data for use in policies and programmes, and to monitor progress towards the Sustainable Development Goals (SDGs) and other internationally agreed upon commitments.

Preface

There is increasing evidence to show that children from the poorest and most marginalized populations are the most likely to have their rights denied.

A shortage of reliable data makes it difficult for policy and decision-makers to understand the situation of these children and formulate appropriate strategies, policies and programmes. The survey was therefore designed to highlight small communities in the Bangkok Metropolitan Authority (BMA).

The Bangkok Small Community Multiple Indicator Cluster Survey (MICS) seeks to generate statistically valid data on children in the most disadvantaged and vulnerable communities through a systematic and evidence-based approach. This survey provides a unique source of data and information, covering more than 80 indicators in the areas of nutrition, child health, water and sanitation, reproductive health, child development, literacy and education, child protection and HIV/AIDS. Data derived from the survey will help to clearly identify issues that adversely affect the well-being and development of children in Thailand. A more comprehensive understanding of the situation of children in small communities in the BMA will enable improved planning for equity-based policies and programme interventions. It will also respond to the national policy to leave no-one behind.

The National Statistical Office carried out the Bangkok Small Community MICS from January to March 2016, the same period as the National MICS which was conducted during November 2015 to March 2016. The national survey findings report is available at www.nso.go.th or mics.unicef.org, providing detailed results for reference purposes. The Bangkok survey was made possible through financial and technical support mainly from the United Nations Children's Fund (UNICEF) and the National Health Security Office. A joint Royal Thai Government Steering Group guided an initial planning of the survey. A technical group, composed of representatives from key line ministries and local experts, assisted in customizing and adapting the global MICS 5 tools to the local context.

We would like to express our gratitude for the contributions from line ministries and organizations, namely the BMA, the Ministry of Public Health, Ministry of Education, Ministry of Social Development and Human Security, Ministry of Labour, Office of the NESDB, National Health Security Office, International Health Policy Program, the Thai Health Promotion Foundation, the Institute for Population and Social Research: Mahidol University, the College of Population Studies: Chulalongkorn University, public and private institutions and the general public. In addition, we acknowledge the expertise contributed by various consultants at global, regional and national level related to sampling, training, fieldwork, data processing and report writing. This survey would not have been possible without the commitment of the NSO and the BMA, and in particular, the supervisors and interviewers.

Summary Table of Survey Implementation and the Survey Population

The Bangkok Small Community Multiple Indicator Cluster Survey (MICS 2016) was conducted from January to March 2016 by the NSO using the same tools developed for the National and 14 Provinces Multiple Indicator Cluster Surveys. Technical and financial support for the survey was provided mainly by UNICEF Thailand. The Bangkok Small Community MICS 2016 provides valuable information and the latest data on the situation of children and women living in small communities in Bangkok. The survey is based on a sample of 2,707 interviewed households, 2,843 interviewed eligible women, 1,330 mothers/caretakers of children under five and 2,664 eligible men. The response rate for households, women, men and children under five was well above 90 per cent.

Survey implementation			
Sample frame	Oct-Dec, 2014	Questionnaires	Household Women (age 15-49) Men (age 15-49) Children under five
Interviewer training	September, 2015	Fieldwork	January to March 2016
Survey sample			
Households		Children under five (age under 5 years)	
- Sampled	2,985	- Eligible	1,351
- Occupied	2,894	- Mothers/caretakers interviewed	1,330
- Interviewed	2,707	- Response rate (Per cent)	98.4
- Response rate (Per cent)	93.5		
Women (age 15-49 years)		Men (age 15-49 years)	
- Eligible for interviews	2,988	- Eligible for interviews	2,866
- Interviewed	2,843	- Interviewed	2,664
- Response rate (Per cent)	95.1	- Response rate (Per cent)	93.0

Survey population			
Average household size	3.3	Percentage of women age 15-49 years with at least one live birth in the last 2 years	8.0

Key Messages and Summary Table of Findings¹

Nutrition

Almost all children (99.9 per cent) born during the two years prior to the survey were weighed at birth. Overall, 8.1 per cent were reported to weigh less than 2,500 grams at birth. The prevalence of moderate and severe underweight among children under five in Bangkok's small communities is reported at 5.2 per cent. Moreover, 1 in 8 (12.5 per cent) children under five is overweight.

One in 10 (10.0 per cent) children in Bangkok's small communities is moderately or severely stunted. The highest percentage of stunting is reported for children aged 18-23 months (16.6 per cent).

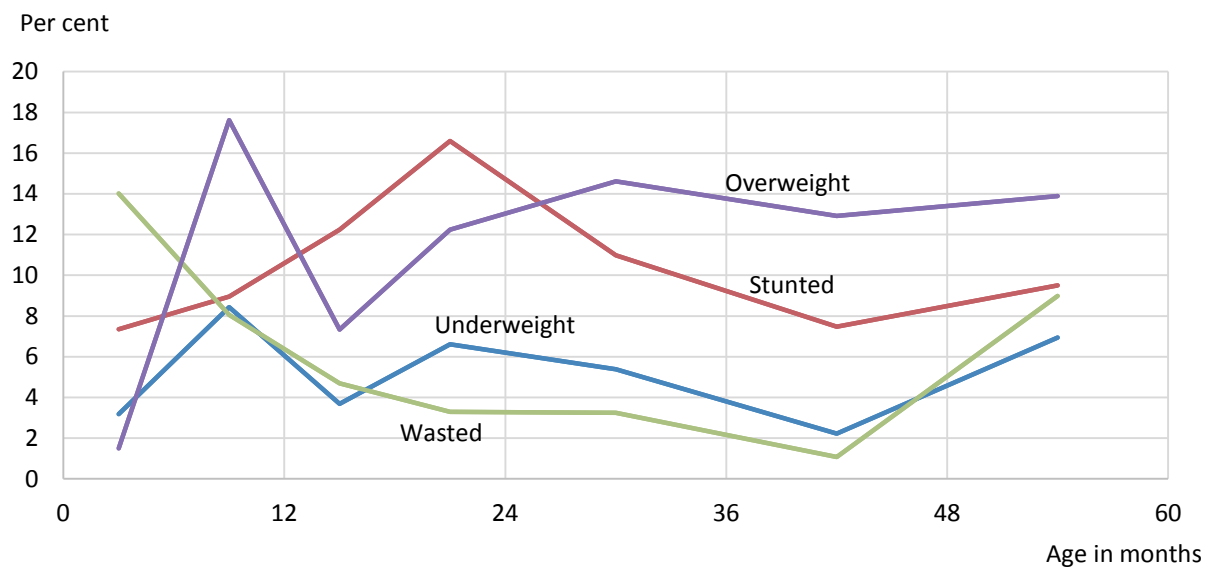

Moderate or severe wasting among children under five in Bangkok's small communities stands at 5.7 per cent. Fourteen per cent of children aged 0-5 months were reported to have moderate or severe wasting at the time of the survey. The survey results show that household wealth quintile does not show obvious relationship with the percentage of infants weighing under 2,500 grams and the prevalence of malnutrition.

Almost all (95.0 per cent) newborns in Bangkok's small communities were breastfed at some point after birth. However, only 38.9 per cent started breastfeeding at the correct time (i.e., within one hour of birth). A total of 10.8 per cent of infants aged 0-5 months are exclusively breastfed, which is substantially below the national average (23.1 per cent). A total of 36.4 per cent of children under 6 months of age are predominantly breastfed. One in six (16.6 per cent) children receives continued breastfeeding at 1 year. One in five (20.5 per cent) children aged 0-23 months receives age-appropriate breastfeeding. Almost 6 out of 10 (57.4 per cent) children aged 6-23 months currently breastfeeding receive the minimum acceptable diet compared to 76.2 per cent of non-breastfeeding children in the same age group.

Adequately iodized salt, defined as salt containing 15 or more parts per million (15+ ppm), is used in two out of three households (67.4 per cent).

¹ See Appendix D for a detailed description of MICS5 indicators

Figure 1 Underweight, stunted, wasted and overweight children under age 5 (moderate and severe), Bangkok Small Community MICS, 2016

NUTRITION				
MICS5 Indicator	Indicator	Description		Value
Nutritional status				
2.1a		Underweight prevalence (a) Moderate and severe (b) Severe	Percentage of children under age 5 who fall below (a) minus two standard deviations (moderate and severe) (b) minus three standard deviations (severe) of the median weight for age of the WHO standard	5.2
2.1b				0.9
2.2a	SDG 2.2.1	Stunting prevalence (a) Moderate and severe (b) Severe	Percentage of children under age 5 who fall below (a) minus two standard deviations (moderate and severe) (b) minus three standard deviations (severe) of the median height for age of the WHO standard	10.0
2.2b	SDG 2.2.1			4.4
2.3a	SDG 2.2.2	Wasting prevalence (a) Moderate and severe (b) Severe	Percentage of children under age 5 who fall below (a) minus two standard deviations (moderate and severe) (b) minus three standard deviations (severe) of the median weight for height of the WHO standard	5.7
2.3b	SDG 2.2.2			1.4
2.4		Overweight prevalence	Percentage of children under age 5 who are above two standard deviations of the median weight for height of the WHO standard	12.5
Breastfeeding and infant feeding				
2.5		Children ever breastfed	Percentage of women age 15-49 years with a live birth in the last 2 years who breastfed their last live-born child at any time	95.0
2.6		Early initiation of breastfeeding	Percentage of women with a live birth in the last 2 years who put their last newborn to the breast within one hour of birth	38.9
2.7		Exclusive breastfeeding under 6 months	Percentage of infants under 6 months of age who are exclusively breastfed	10.8
2.8		Predominant breastfeeding under 6 months	Percentage of infants under 6 months of age who received breast milk as the predominant source of nourishment during the previous day	36.4
2.9		Continued breastfeeding at 1 year	Percentage of children age 12-15 months who received breast milk during the previous day	16.6
2.10		Continued breastfeeding at 2 years	Percentage of children age 20-23 months who received breast milk during the previous day	10.4
2.11		Median duration of breastfeeding	The age in months when 50 Per cent of children age 0-35 months did not receive breast milk during the previous day	7.0
2.12		Age-appropriate breastfeeding	Percentage of children age 0-23 months appropriately fed during the previous day	20.5
2.13		Introduction of solid, semi-solid or soft foods	Percentage of infants age 6-8 months who received solid, semi-solid or soft foods during the previous day	85.1
2.14		Milk feeding frequency for non-breastfed children	Percentage of non-breastfed children age 6-23 months who received at least 2 milk feedings during the previous day	93.8
2.15		Minimum meal frequency	Percentage of children age 6-23 months who received solid, semi-solid or soft foods (plus milk feeds for non-breastfed children) the minimum number of times or more during the previous day	86.8
2.16		Minimum dietary diversity	Percentage of children age 6–23 months who received foods from 4 or more food groups during the previous day	83.5
2.17a		Minimum acceptable diet	(a) Percentage of breastfed children age 6–23 months who had at least the minimum dietary diversity and the minimum meal frequency during the previous day (b) Percentage of non-breastfed children age 6–23 months who received at least 2 milk feedings and had at least the minimum dietary diversity not including milk feeds and the minimum meal frequency during the previous day	57.4
2.17b				76.2
2.18		Bottle feeding	Percentage of children age 0-23 months who were fed with a bottle during the previous day	87.6

NUTRITION				
MICS5 Indicator	Indicator	Description		Value
Salt iodization				
2.19		Iodized salt consumption	Percentage of households with salt testing 15 parts per million or more of iodide/iodate	67.4
Low-birthweight				
2.20		Low-birthweight infants	Percentage of most recent live births in the last 2 years weighing below 2,500 grams at birth	8.1
2.S1		Low birth weight infants (born during last five years)	Percentage of live births in the last 5 years weighing below 2,500 grams at birth	9.5
2.21		Infants weighed at birth	Percentage of most recent live births in the last 2 years who were weighed at birth	99.9

Child Health

In Bangkok's small communities, 68.7 per cent of children aged 12-23 months received all the recommended vaccinations before their first birthday. Among children aged 12-23 months, 96.7 per cent were protected against tuberculosis before their first birthday and almost 9 out of 10 children (86.9 per cent) were given the measles vaccine before the age of 12 months. Almost three out of four (72.5 per cent) women aged 15-49 who had a live birth during the previous two years were given at least two doses of tetanus toxoid vaccine for protection against tetanus.

The percentage of children under five reported to have had an episode of diarrhoea, acute respiratory infection (ARI) and fever are 3.6 per cent, 0.8 per cent and 19.4 per cent, respectively. Less than one per cent of households use solid fuels for cooking.

Figure 2 Vaccinations by age 12 months, Bangkok Small Community MICS, 2016

CHILD HEALTH				
MICS5 Indicator	Indicator	Description	Value	
Vaccinations				
3.1		Tuberculosis immunization coverage	Percentage of children age 12-23 months who received BCG vaccine by their first birthday	96.7
3.2		Polio immunization coverage	Percentage of children age 12-23 months who received the third dose of OPV vaccine (OPV3) by their first birthday	78.2
3.3		Diphtheria, pertussis and tetanus (DPT) immunization coverage	Percentage of children age 12-23 months who received the third dose of DPT vaccine (DPT3) by their first birthday	82.5
3.4		Measles immunization coverage	Percentage of children age 12-23 months who received measles vaccine by their first birthday	86.9
3.5		Hepatitis B immunization coverage	Percentage of children age 12-23 months who received the third dose of Hepatitis B vaccine (HepB3) by their first birthday	75.3
3.8	SDG 3.b.1	Full immunization coverage	Percentage of children age 12-23 months who received all vaccinations recommended in the national immunization schedule by their first birthday	68.7
Tetanus toxoid				
3.9		Neonatal tetanus protection	Percentage of women age 15-49 years with a live birth in the last 2 years who were given at least two doses of tetanus toxoid vaccine within the appropriate interval prior to the most recent birth	72.5
Diarrhoea				
-		Children with diarrhoea	Percentage of children under age 5 with diarrhoea in the last 2 weeks	3.6
3.10		Care-seeking for diarrhoea	Percentage of children under age 5 with diarrhoea in the last 2 weeks for whom advice or treatment was sought from a health facility or provider	(36.5)
3.S1		Diarrhoea treatment with oral rehydration salts (ORS)	Percentage of children under age 5 with diarrhoea in the last 2 weeks who received ORS	(71.9)
3.12		Diarrhoea treatment with oral rehydration therapy (ORT) and continued feeding	Percentage of children under age 5 with diarrhoea in the last 2 weeks who received ORT (ORS packet, pre-packaged ORS fluid, recommended homemade fluid or increased fluids) and continued feeding during the episode of diarrhoea	(64.2)
Acute Respiratory Infection (ARI) symptoms				
-		Children with ARI symptoms	Percentage of children under age 5 with ARI symptoms in the last 2 weeks	0.8
Solid fuel use				
3.15		Use of solid fuels for cooking	Percentage of household members in households that use solid fuels as the primary source of domestic energy to cook	0.5
() Figures that are based on 25-49 unweighted cases				

CHILD HEALTH				
MICS5 Indicator	Indicator	Description		Value
Fever				
-		Children with fever	Percentage of children under age 5 with fever in the last 2 weeks	19.4
3.20		Care-seeking for fever	Percentage of children under age 5 with fever in the last 2 weeks for whom advice or treatment was sought from a health facility or provider	85.3
<p>Note:</p> <p>1. The detailed findings of indicator 3.10 Care-seeking for diarrhoea, 3.S1 Diarrhoea treatment with oral rehydration salts, 3.12 Diarrhoea treatment with oral rehydration therapy and continued feeding are not presented in this report due to the low number of reported cases during the field work.</p> <p>2. The findings of indicator 3.13 Care seeking for children with ARI symptoms and 3.14 Antibiotic treatment for children with ARI symptoms, are not presented in this report due to the low number of reported cases during the field work.</p>				

Water and Sanitation

The Bangkok Small Community MICS 2016 shows that almost all of the population (99.8 per cent) has access to improved sources of drinking water. Similarly, the percentage of household members using improved sanitation facilities that are not shared is quite high, at 90.7 per cent. Households in the poorest wealth quintile are more likely to use a shared sanitation facility. Only 31.5 per cent of children under 2 years of age had their last stool disposed of safely. More than three out of four (77.0 per cent) households in Bangkok's small communities with a specific place for handwashing had water and soap or other cleansing agents present at the handwashing place.

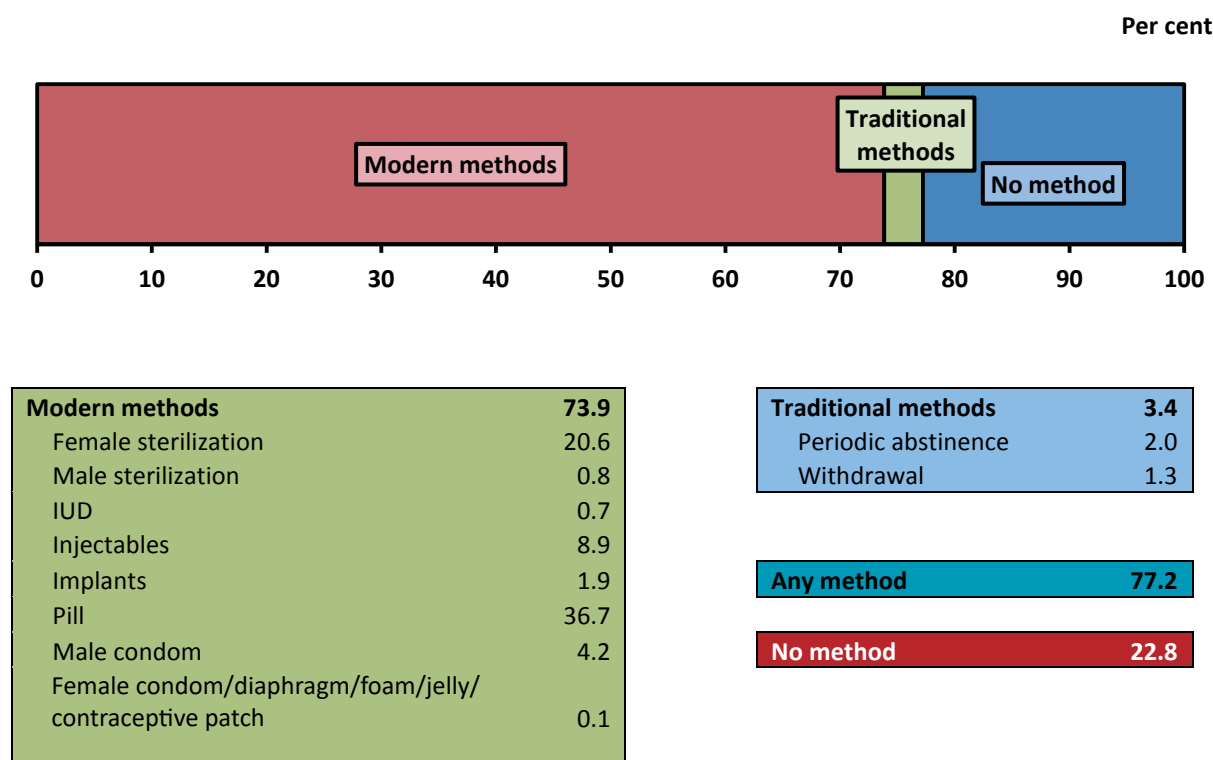

WATER AND SANITATION				
MICS5 Indicator	Indicator	Description		Value
Water and sanitation				
4.1		Use of improved drinking water sources	Percentage of household members using improved sources of drinking water	99.8
4.3	SDG 1.4.1 & 6.2.1	Use of improved sanitation	Percentage of household members using improved sanitation facilities which are not shared	90.7
4.4		Safe disposal of child's faeces	Percentage of children age 0-2 years whose last stools were disposed of safely	31.5
4.5	SDG 6.2.1	Place for handwashing	Percentage of households with a specific place for hand washing where water and soap or other cleansing agent are present	77.0
4.6		Availability of soap or other cleansing agent	Percentage of households with soap or other cleansing agent	73.3
Note: The findings of indicator 4.2 Water treatment is not presented in this report due to the low number of reported cases during the field work.				

Reproductive Health

The total fertility rate (TFR) as a measure of current fertility is estimated at 1.6 children per woman. A total of 12.8 per cent of women aged 20-24 had a live birth before the age of 18. Current use of a contraceptive method is reported by 77.2 per cent of currently married women. Total unmet need for contraception is 6.4 per cent compared to 6.2 per cent at the national level.

Among women who had a live birth in the last two years, almost all (98.8 per cent) received antenatal care from skilled personnel at least once during their pregnancy. About 84.8 per cent of women in this group had four or more antenatal care visits during their last pregnancy. Mothers in the poorest and second poorest households are less likely than mothers in other wealth index quintiles to receive antenatal care four or more times. Almost all deliveries (99.9 per cent) were attended by skilled healthcare personnel. Similarly, almost all (98.9 per cent) deliveries during the last two years took place in a health facility. One out of three (33.1 per cent) live births in the last two years was delivered by caesarean section.

Figure 3 Use of contraception, Bangkok Small Community MICS, 2016

REPRODUCTIVE HEALTH				
MICS5 Indicator	Indicator	Description		Value
Contraception and unmet need				
-		Total fertility rate	Total fertility rate for women age 15-49 years	1.6
5.1	SDG 3.7.2	Adolescent birth rate	Age-specific fertility rate for women age 15-19 years	79
5.2		Early childbearing	Percentage of women age 20-24 years who had at least one live birth before age 18	12.8
5.3		Contraceptive prevalence rate	Percentage of women age 15-49 years currently married or in union who are using (or whose partner is using) a (modern or traditional) contraceptive method	77.2
5.4		Unmet need	Percentage of women age 15-49 years who are currently married or in union who are fecund and want to space their births or limit the number of children they have and who are not currently using contraception	6.4
Maternal and newborn health				
5.5a 5.5b		Antenatal care coverage	Percentage of women age 15-49 years with a live birth in the last 2 years who received antenatal care during their last pregnancy that led to a live birth (a) at least once by skilled health personnel (b) at least four times by any provider	98.8 84.8
5.6		Content of antenatal care	Percentage of women age 15-49 years with a live birth in the last 2 years who had their blood pressure measured and gave urine and blood samples during the last pregnancy that led to a live birth	98.3
5.S1		STI (VDRL 1st) screening during antenatal care	Percentage of women age 15-49 years with a live birth in the last 2 years who had blood screening for STIs (VDRL 1 st) with the results written in the health book	42.5
5.S2		STI (VDRL 2nd) screening during antenatal care	Percentage of women age 15-49 years with a live birth in the last 2 years who had blood screening for STIs (VDRL 2 nd) with the results written in the health book	27.0
5.S3		Thalassemia screening for women during antenatal care	Percentage of women age 15-49 years with a live birth in the last 2 years who had blood screening for thalassemia with the results written in the health book	40.2
5.S4		Thalassemia screening for husband	Percentage of women age 15-49 years with a live birth in the last 2 years whose husband had blood screening for thalassemia with the results written in the health book	22.4
5.7	SDG 3.1.2	Skilled attendant at delivery	Percentage of women age 15-49 years with a live birth in the last 2 years who were attended by skilled health personnel during their most recent live birth	99.9
5.8		Institutional deliveries	Percentage of women age 15-49 years with a live birth in the last 2 years whose most recent live birth was delivered in a health facility	98.9
5.9		Caesarean section	Percentage of women age 15-49 years whose most recent live birth in the last 2 years was delivered by caesarean section	33.1
5.S5		Post-natal health check	Percentage of women age 15-49 years with a live birth in the last 2 years who had at least three post-natal health checks within 42 days of delivery	6.1

Early Childhood Development

In Bangkok's small communities, 63.0 per cent of children aged 3-4 years are attending an organized early childhood education programme. Girls are more likely to attend early childhood education than boys (68.8 per cent and 56.4 per cent, respectively).

Moreover, for 96.4 per cent of children, an adult household member engages in four or more activities that promote learning or school readiness. Two out of three (65.2 per cent) children have access to two or more playthings in the home. Less than half of children in the poorest wealth quintile have 3 or more children's books at home compared to 70.1 per cent of children in the richest quintile households. Similarly, children in the poorest households are nearly four times less likely (7.5 per cent) to have 10 or more books compared to children in the richest households (27.1 per cent).

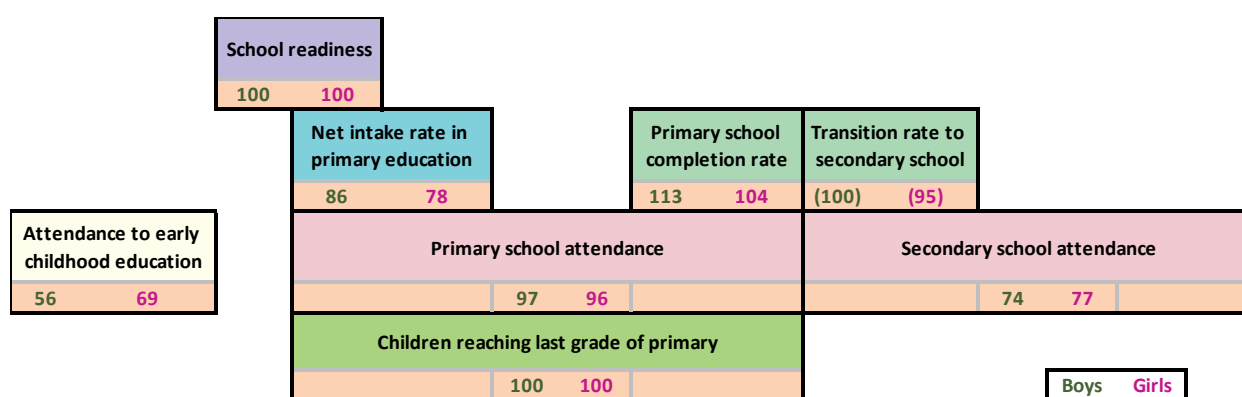

Some (4.3 per cent) children aged under five were left with inadequate care during the week preceding the survey. Among children aged 36-59 months, 92.1 per cent are developmentally on track.

EARLY CHILDHOOD DEVELOPMENT				
MICS5 Indicator	Indicator	Description		Value
Early Childhood Development				
6.1		Attendance to early childhood education	Percentage of children age 36-59 months who are attending an early childhood education programme	63.0
6.2		Support for learning	Percentage of children age 36-59 months with whom an adult has engaged in four or more activities to promote learning and school readiness in the last 3 days	96.4
6.3		Father's support for learning	Percentage of children age 36-59 months whose biological father has engaged in four or more activities to promote learning and school readiness in the last 3 days	44.2
6.4		Mother's support for learning	Percentage of children age 36-59 months whose biological mother has engaged in four or more activities to promote learning and school readiness in the last 3 days	71.2
6.5		Availability of children's books	Percentage of children under age 5 who have three or more children's books	52.9
6.6		Availability of playthings	Percentage of children under age 5 who play with two or more types of playthings	65.2
6.S1		Availability of playthings (Electronic devices)	Percentage of children under age 5 who play with electronic devices, i.e., mobile phones, tablets and game players	56.0
6.7		Inadequate care	Percentage of children under age 5 left alone or in the care of another child younger than 10 years of age for more than one hour at least once in the last week	4.3
6.8	SDG 4.2.1	Early child development index	Percentage of children age 36-59 months who are developmentally on track in at least three of the following four domains: literacy-numeracy, social-emotional, physical, and learning	92.1

Literacy and Education

In Bangkok’s small communities, 96.0 per cent of young women aged 15-24 years and 93.0 per cent of young men in the same age group are literate and both men and women living in the poorest households are less likely to be literate compared to other quintiles. In terms of school readiness, the percentage of children attending Grade 1 who were attending preschool the previous year is 100.0 per cent. Overall, 82.0 per cent of primary school entry-age children enter primary school Grade 1. The net attendance ratio at primary level (adjusted) is 96.6 per cent and the net attendance ratio (adjusted) at secondary level is 75.5 per cent. All children entering Grade 1 eventually reach Grade 6. Overall, 97.7 per cent complete primary school and transit into secondary school.

Figure 4 Education indicators by sex, Bangkok Small Community MICS, 2016

Note: All indicator values are in percent
 () Figures that are based on 25-49 unweighted cases

LITERACY AND EDUCATION			
MICS5 Indicator	Indicator	Description	Value
Literacy and Education			
7.1		Literacy rate among young people	Percentage of young people age 15-24 years who are able to read a short simple statement about everyday life or who attended secondary or higher education (a) women (b) men
			96.0 93.0
7.2		School readiness	Percentage of children in first grade of primary school who attended pre-school during the previous school year
			100.0
7.3		Net intake rate in primary education	Percentage of children of school-entry age who enter the first grade of primary school
			82.0
7.4		Primary school net attendance ratio (adjusted)	Percentage of children of primary school age currently attending primary or secondary school
			96.6
7.5		Secondary school net attendance ratio (adjusted)	Percentage of children of secondary school age currently attending secondary school or higher
			75.5
7.6		Children reaching last grade of primary	Percentage of children entering the first grade of primary school who eventually reach last grade
			100.0
7.7		Primary completion rate	Number of children attending the last grade of primary school (excluding repeaters) divided by number of children of primary school completion age (age appropriate to final grade of primary school)
			108.6
7.8		Transition rate to secondary school	Number of children attending the last grade of primary school during the previous school year who are in the first grade of secondary school during the current school year divided by number of children attending the last grade of primary school during the previous school year
			97.7
7.9	SDG 4.5.1	Gender parity index (primary school)	Primary school net attendance ratio (adjusted) for girls divided by primary school net attendance ratio (adjusted) for boys
			0.99
7.10	SDG 4.5.1	Gender parity index (secondary school)	Secondary school net attendance ratio (adjusted) for girls divided by secondary school net attendance ratio (adjusted) for boys
			1.05

Child Protection

Almost all (99.9 per cent) children under age five have their births registered. The percentage of households using violent discipline methods is quite similar to the national average. A total of 73.1 per cent of children aged 1-14 years in Bangkok’s small communities experienced psychological aggression or physical punishment during the previous one month compared to 75.2 per cent at the national level.

Among women aged 15-19 years, 20.5 per cent are currently married compared to 7.9 per cent of men in the same age group. Among women aged 20-24, 20.1 per cent were married or in union before age 18. A total of 1.9 per cent of women aged 15-49 are in polygynous marriages/union compared to 2.5 per cent of men in this same age group. Moreover, 13.8 per cent of women aged 15-19 and 12.7 per cent of women aged 20-24 are married to or in union with a person older by 10 or more years.

Overall, 5.8 per cent of women in Bangkok’s small communities feel that a husband/partner is justified in hitting or beating his wife if she neglects the children, goes out without her husband’s permission, refuses sex with her husband, burns food or argues with her husband. A slightly higher percentage (7.1 per cent) of men feel that a husband is justified in hitting or beating his wife in at least one of the five situations mentioned above.

Almost one out of six (15.8 per cent) children aged 0-17 lives with neither biological parent. In total, 3.6 per cent of children in Bangkok’s small communities have one or both parents dead and 0.4 per cent have at least one parent abroad.

Figure 5 Child disciplining methods, children age 1-14 years, Bangkok Small Community MICS, 2016

CHILD PROTECTION				
MICS5 Indicator	Indicator	Description		Value
Birth registration				
8.1	SDG 16.9.1	Birth registration	Percentage of children under age 5 whose births are reported registered	99.9
Child discipline				
8.3	SDG 16.2.1	Violent discipline	Percentage of children age 1-14 years who experienced psychological aggression or physical punishment during the last one month	73.1
Early marriage and polygyny				
8.4		Marriage before age 15	Percentage of people age 15-49 years who were first married or in union before age 15 (a) women (b) men	2.9 1.9
8.5		Marriage before age 18	Percentage of people age 20-49 years who were first married or in union before age 18 (a) women (b) men	17.1 8.7
8.6		Young people age 15-19 years currently married or in union	Percentage of young people age 15-19 years who are married or in union (a) women (b) men	20.5 7.9
8.7		Polygyny	Percentage of people age 15-49 years who are in a polygynous union (a) women (b) men	1.9 2.5
8.8a 8.8b		Spousal age difference	Percentage of young women who are married or in union and whose spouse is 10 or more years older, (a) among women age 15-19 years, (b) among women age 20-24 years	13.8 12.7
Attitudes towards domestic violence				
8.12		Attitudes towards domestic violence	Percentage of people age 15-49 years who state that a husband is justified in hitting or beating his wife in at least one of the following circumstances: (1) she goes out without telling him, (2) she neglects the children, (3) she argues with him, (4) she refuses sex with him, (5) she burns the food (a) women (b) men	5.8 7.1
Children's living arrangements				
8.13		Children's living arrangements	Percentage of children age 0-17 years living with neither biological parent	15.8
8.14		Prevalence of children with one or both parents dead	Percentage of children age 0-17 years with one or both biological parents dead	3.6
8.15		Children with at least one parent living abroad	Percentage of children 0-17 years with at least one biological parent living abroad	0.4

HIV/AIDS

Almost all women (98.9 per cent) and men (98.8 per cent) aged 15-49 in Bangkok's small communities have heard of AIDS. However, only 48.0 per cent of women and 47.4 per cent of men have comprehensive knowledge about HIV prevention. About 57.0 per cent of women and 48.8 per cent of men who have heard of AIDS know that HIV can be transmitted from mother to child during pregnancy, during delivery and by breastfeeding. This indicator was lowest among women and men living in the poorest households.

A total of 14.3 per cent of women and 13.1 per cent of men aged 15-49 express an accepting attitude towards people living with HIV. A high percentage of women (87.4 per cent) and men (82.9 per cent) aged 15-49 years have knowledge of a place for HIV testing. Some 7.7 per cent of women were tested for HIV during the previous 12 months and know the result compared to 7.6 per cent of men in the same period.

Among women who received antenatal care for their last pregnancy during the previous two years, 69.8 per cent received HIV counselling during antenatal care and 66.8 per cent were offered an HIV test, accepted the offer and received the results of the HIV test.

HIV/AIDS				
MICS5 Indicator	Indicator	Description		Value
HIV/AIDS knowledge and attitudes				
-		Have heard of AIDS	Percentage of people age 15-49 years who have heard of AIDS (a) women (b) men	98.9 98.8
9.1		Knowledge about HIV prevention among young people	Percentage of young people age 15-24 years who correctly identify ways of preventing the sexual transmission of HIV, and who reject major misconceptions about HIV transmission (a) women (b) men	51.5 43.8
9.2		Knowledge of mother-to-child transmission of HIV	Percentage of people age 15-49 years who correctly identify all three means of mother-to-child transmission of HIV (a) women (b) men	57.0 48.8
9.3		Accepting attitudes towards people living with HIV	Percentage of people age 15-49 years expressing accepting attitudes on all four questions toward people living with HIV (a) women (b) men	14.3 13.1
HIV testing				
9.4		People who know where to be tested for HIV	Percentage of people age 15-49 years who state knowledge of a place to be tested for HIV (a) women (b) men	87.4 82.9
9.5		People who have been tested for HIV and know the results	Percentage of people age 15-49 years who have been tested for HIV in the last 12 months and who know their results (a) women (b) men	7.7 7.6
9.7		HIV counselling during antenatal care	Percentage of women age 15-49 years who had a live birth in the last 2 years and received antenatal care during the pregnancy of their most recent birth, reporting that they received counselling on HIV during antenatal care	69.8
9.8		HIV testing during antenatal care	Percentage of women age 15-49 years who had a live birth in the last 2 years and received antenatal care during the pregnancy of their most recent birth, reporting that they were offered and accepted an HIV test during antenatal care and received their results	66.8

¹ MICS indicator 2.17a - Minimum acceptable diet (breastfed) ² MICS indicator 2.17b - Minimum acceptable diet (non-breastfed)

³ MICS indicator 2.14 - Milk feeding frequency for non-breastfed children

⁴ MICS indicator 2.16 - Minimum dietary diversity ⁵ MICS indicator 2.15 - Minimum meal frequency

^a Minimum dietary diversity is defined as receiving foods from at least 4 of 7 food groups: 1) Grains, roots and tubers, 2) legumes and nuts, 3) dairy products (milk, yogurt, cheese), 4) flesh foods (meat, fish, poultry and liver/organ meats), 5) eggs, 6) vitamin-A rich fruits and vegetables, and 7) other fruits and vegetables.

^b Minimum meal frequency among currently breastfeeding children is defined as children who also received solid, semi-solid, or soft foods 2 times or more daily for children age 6-8 months and 3 times or more daily for children age 9-23 months. For non-breastfeeding children age 6-23 months it is defined as receiving solid, semi-solid or soft foods, or milk feeds, at least 4 times.

^c The minimum acceptable diet for breastfed children age 6-23 months is defined as receiving the minimum dietary diversity and the minimum meal frequency, while for non-breastfed children further requires at least 2 milk feedings and that the minimum dietary diversity is achieved without counting milk feeds.

² MICS indicator 6.3 - Father's support for learning

³ MICS indicator 6.4 - Mother's support for learning

na: not applicable

(*) Figures that are based on less than 25 unweighted cases

^a The background characteristic "Mother's education" refers to the education level of the respondent to the Questionnaire for Children Under Five, and covers both mothers and primary caretakers, who are interviewed when the mother is not listed in the same household. Since indicator 6.4 reports on the biological mother's support for learning, this background characteristic refers to only the educational levels of biological mothers when calculated for the indicator in question.

¹MICS indicator 9.1 - Knowledge about HIV prevention among young men^[M]

^a Refer to Table HA.3M for the four indicators.

(*) Figures that are based on fewer than 25 unweighted cases

Appendix B. Sample Design

The major features of the sample design are described in this appendix. Sample design features include target sample size, sample allocation, sampling frame and listing, choice of domains, sampling stages and the calculation of sample weights.

The primary objective of the sample design for the Bangkok Small Community Multiple Indicator Cluster Survey was to produce statistically reliable estimates of most indicators, at Bangkok level.

Sample Size and Sample Allocation

The sample size for the Bangkok Small Community MICS was calculated as 3,000 households. For the calculation of the sample size, the key indicator used was the stunting prevalence among children aged 0-4 years. The following formula was used to estimate the required sample size for this indicator:

$$n = \frac{[4(r)(1-r)(deff)]}{[(0.12r)^2 (pb)(AveSize)(RR)]}$$

where

- n is the required sample size, expressed as number of households
- 4 is a factor to achieve the 95 per cent level of confidence
- r is the predicted or anticipated value of the indicator, expressed in the form of a proportion
- $deff$ is the design effect for the indicator, estimated from a previous survey or using a default value of 2
- $0.12r$ is the margin of error to be tolerated at the 95 per cent level of confidence, defined as 12 per cent of r (relative margin of error of r)
- pb is the proportion of the total population upon which the indicator, r , is based
- $AveSize$ is the average household size (number of persons per household)
- RR is the predicted response rate

For the calculation, r (stunting prevalence) was assumed to be 16 per cent. The value of $deff$ (design effect) was taken as 2 based on estimates from previous surveys, pb (percentage of children aged 0-4 years in the total population) was taken as 11 per cent, $AveSize$ (average household size) was taken as 3.69 persons, and the response rate was assumed to be 90 per cent, based on experience from previous surveys.

The resulting number of households from this exercise was 3,000 households, which is the sample size needed.

The number of households selected per cluster for the Bangkok Small Community MICS was determined as 20 households based on a number of considerations, including the design effect, the budget available, and the time that would be needed per team to complete one cluster. Dividing the total number of households by the number of sample households per cluster, it was calculated that 150 sample clusters would need to be selected.

Sampling Frame, Selection of Clusters and Listing Activities

The primary sampling units (PSUs) at the first stage were enumeration areas (EAs). The sampling frame for the selection of EAs was derived from the 2010 Population and Housing Census (PHC), which had been updated by the National Statistical Office. Systematic sampling was used to draw sample EAs. For each EA selected, a new list of households was used as the sampling frame for the selection of households in the second sampling stage. Enumerators from the Field Administration Bureau listed all dwellings and recorded the number of all households located in sample EAs. The listing information included the identification number of the building, identification number of the household, address, name of the household head, the total number of household members and the identification of households with children aged under 5 years.

Selection of Households

After completing the household listing for each selected EA, all households were divided into two groups:

- 1st group consists of households with children aged under 5 years.
- 2nd group consists of the rest of the households.

Systematic random sampling was then applied to select 10 households within each group. Therefore a total of 20 households were selected in each sample EA.

Calculation of Sample Weights

The Bangkok Small Community MICS sample is not self-weighting. Essentially, by selecting an equal number of households in each EA, different sampling fractions were used in each EA at the second sampling stage since the size of the EAs varied. For this reason, sample weights were calculated and these were used in the subsequent analyses of the survey data.

The major component of the weight is the reciprocal of the sampling fraction employed in selecting the number of sample households in the particular sampling PSU (i) and group (j), where the groups correspond to households with and without children aged under 5 years:

$$W_{ij} = \frac{1}{f_{ij}}$$

The term f_{ij} , the sampling fraction for the j-th group in the i-th sample PSU, is the product of probabilities of selection at every stage:

$$f_{ij} = p_{1i} \times p_{2ij}$$

where p_{sij} is the probability of selection of the sampling unit at stage s for the j-th group in the i-th sample PSU.

Since the estimated number of households in each enumeration area (PSU) in the sampling frame used for the first stage selection was generally different from the updated number of households in the EA from the listing, and the number of households with and without children varied by EA, individual sampling fractions for households in each sample EA (cluster) were calculated separately for the groups of households with and without children under age five. The sampling fractions for households in each EA (cluster) therefore included the first stage probability of selection of the EA and the second stage probability of selection of a household in the sample EA (cluster), separately for households with and without children.

A second component in the calculation of sample weights takes into account the level of non-response for the household and individual interviews. The adjustment for household non-response is equal to the inverse value of:

$$RR = \text{Number of interviewed households} / \text{Number of occupied households selected}$$

After the completion of fieldwork, response rates were calculated separately for the groups of households with and without children under age five. These were used to adjust the sample weights calculated for each cluster by group. Response rates in the Bangkok Small Community MICS are shown in Table HH.1 in this report.

Similarly, the adjustment for non-response at the individual level (women, men and under-five children) is equal to the inverse value of:

$$RR = \text{Completed women's (men's or under-5's) questionnaires} / \text{Eligible women (men or under-5s) in the sample households interviewed}$$

These response rates were also calculated separately for the groups of households with and without children. The non-response adjustment factors for women's, men's and under-5's questionnaires are applied to the adjusted household weights. The numbers of eligible women, men and under-five children were obtained from the roster of household members in the Household Questionnaire for households where interviews were completed.

The design weights for the households were calculated by multiplying the above factors for each EA separately for the groups of households with and without children. These weights were then standardized (or normalized), one purpose of which is to make the weighted sum of the interviewed sample units equal to the total sample size. Normalization is achieved by dividing the full sample weights (adjusted for non-response) by the average of these weights across all households. This is performed by multiplying the sample weights by a constant factor equal to the unweighted number of households divided by the weighted total number of households (using the full sample weights adjusted for non-response). A similar normalization procedure was followed in obtaining standardized weights for the women's, men's and under-5's questionnaires. In the 150 sample EAs (clusters) the normalized household weights varied between 0.113322 and 3.640729; the normalized women weights varied from 0.136413 to 4.405687; the normalized men weights varied from 0.131009 to 4.180540 and the normalized children weights varied from 0.325945 to 9.360753.

Appendix C Estimates of sampling errors

The sample of respondents selected in the Bangkok Small Community Multiple Indicator Cluster Survey is only one of the samples that could have been selected from the same population, using the same design and size. Each of these samples would yield results that differ somewhat from the results of the actual sample selected. Sampling errors are a measure of the variability between the estimates from all possible samples. The extent of variability is not known exactly, but can be estimated statistically from the survey data.

The following sampling error measures are presented in this appendix for each of the selected indicators:

- *Standard error (se)*: Standard error is the square root of the variance of the estimate. For survey indicators that are means, proportions or ratios, the Taylor series linearization method is used for the estimation of standard errors. For more complex statistics, such as fertility and mortality rates, the Jackknife repeated replication method is used for standard error estimation.
- *Coefficient of variation (se/r)* is the ratio of the standard error to the value (r) of the indicator, and is a measure of the relative sampling error.
- *Design effect (deff)* is the ratio of the actual variance of an indicator, under the sampling method used in the survey, to the variance calculated under the assumption of simple random sampling based on the same sample size. The *square root of the design effect (deft)* is used to show the efficiency of the sample design in relation to the precision. A *deft* value of 1.0 indicates that the sample design of the survey is as efficient as a simple random sample for a particular indicator, while a *deft* value above 1.0 indicates an increase in the standard error due to the use of a more complex sample design.
- *Confidence limits* are calculated to show the interval within which the true value for the population can be reasonably assumed to fall, with a specified level of confidence. For any given statistic calculated from the survey, the value of that statistic will fall within a range of plus or minus two times the standard error ($r + 2.se$ or $r - 2.se$) of the statistic in 95 per cent of all possible samples of identical size and design.

For the calculation of sampling errors from MICS data, programs developed in CPro Version 5.0, SPSS Version 21 Complex Samples module and CMRJack³ have been used.

The results are shown in the tables that follow. In addition to the sampling error measures described above, the tables also include weighted and unweighted counts of denominators for each indicator. Given the use of normalized weights, by comparing the weighted and unweighted counts it is possible to determine whether a particular domain has been under-sampled or over-sampled compared to the average sampling rate. If the weighted count is smaller than the unweighted count, this means that the particular domain had been over-sampled. As explained later in the footnote of Table SE.1, there is an exception in the case of indicators 4.1 and 4.3, for which the unweighted count represents the number of sample households, and the weighted counts reflect the total population.

Sampling errors are calculated for indicators of primary interest, for the Bangkok Small Community level. Seven of the selected indicators are based on households members, 17 are based on women, 5 are

³ CMRJack is a software developed by FAFO, an independent and multidisciplinary research foundation. CMRJack produces mortality estimates and standard errors for surveys with complete birth histories or summary birth histories. See http://www.fafo.no/ais/child_mortality/index.html

based on men, and 15 are based on children under 5. Table SE.1 shows the list of indicators for which sampling errors are calculated, including the base population (denominator) for each indicator. Tables SE.2 show the calculated sampling errors for selected domains.

Table SE.1: Indicators selected for sampling error calculations	
List of indicators selected for sampling error calculations, and base populations (denominators) for each indicator, Bangkok Small Community MICS, 2016	
MICS5 Indicator	Base Population
Household	
4.1 Use of improved drinking water sources	All household members ^a
4.3 Use of improved sanitation	All household members ^a
2.19 Iodized salt consumption	All household members ^a
8.3 Violent discipline	Children age 1-14 years ^b
7.4 Primary school net attendance ratio (adjusted)	Children of primary school age
8.13 Children's living arrangements	Children age 0-17 years
8.14 Prevalence of children with one or both parents dead	Children age 0-17 years
Women	
5.3 Contraceptive prevalence rate	Women age 15-49 years who are currently married or in union
5.4 Unmet need	Women age 15-49 years who are currently married or in union
5.5a Antenatal care coverage (1+ times, skilled provider)	Women age 15-49 years with a live birth in the last 2 years
5.5b Antenatal care coverage (4+ times, any provider)	Women age 15-49 years with a live birth in the last 2 years
5.7 Skilled attendant at delivery	Women age 15-49 years with a live birth in the last 2 years
7.1 Literacy rate (young women)	Women age 15-24 years
9.1 Knowledge about HIV prevention (young women)	Women age 15-24 years
2.6 Early initiation of breastfeeding	Women age 15-49 years with a live birth in the last 2 years
5.2 Early childbearing	Women age 20-24 years who had at least one live birth before age 18
5.9 Caesarean section	Women age 15-49 years with a live birth in the last 2 years
8.5 Percentage married before age 18	Women age 20-49 years who were first married or in union before age 18
8.12 Attitudes towards domestic violence	Women age 15-49 years
9.2 Knowledge of mother-to-child transmission of HIV	Women age 15-49 years
9.3 Accepting attitudes towards people living with HIV	Women age 15-49 years
9.5 Women who have been tested for HIV and know the results	Women age 15-49 years
9.7 HIV counselling during antenatal care	Women age 15-49 years with a live birth in the last 2 years
9.8 HIV testing during antenatal care	Women age 15-49 years with a live birth in the last 2 years

Table SE.1: Indicators selected for sampling error calculations (continued)

List of indicators selected for sampling error calculations, and base populations (denominators) for each indicator, Bangkok Small Community MICS, 2016

MICS5 Indicator	Base Population
Men	
7.1 Literacy rate (young men)	Men age 15-24 years
9.1 Knowledge about HIV prevention (young men)	Men age 15-24 years
8.12 Attitudes towards domestic violence	Men age 15-24 years
9.2 Knowledge of mother-to-child transmission of HIV	Men age 15-24 years
9.3 Accepting attitudes towards people living with HIV	Men age 15-24 years
Under-5s	
2.1a Underweight prevalence (moderate and severe)	Children under age 5 years
2.2a Stunting prevalence (moderate and severe)	Children under age 5 years
2.3a Wasting prevalence (moderate and severe)	Children under age 5 years
2.4 Overweight prevalence	Children under age 5 years
- Fever in last two weeks	Children under age 5 years
2.7 Exclusive breastfeeding under 6 months	Infants under 6 months of age
2.8 Predominantly breastfeeding under 6 months	Infants under 6 months of age
2.12 Age-appropriate breastfeeding	Children age 0-23 months
6.1 Attendance in early childhood education	Children age 36-59 months
6.2 Support for learning	Children age 36-59 months
6.3 Father's support for learning	Children age 36-59 months
6.4 Mother's support for learning	Children age 36-59 months
6.5 Have 3 or more children's books	Children under age 5 years
6.6 Play with two or more types of playthings	Children under age 5 years
- Play with electronic devices	Children under age 5 years
<p>^a To calculate the weighted results of MICS Indicators 4.1 and 4.3, the household weight is multiplied by the number of household members in each household. Therefore the unweighted base population presented in the SE tables reflects the unweighted number of households, whereas the weighted numbers reflect the household population.</p> <p>^b Random selection of one child age 1-14 years per household is carried out during fieldwork for administering the child discipline module. To account for the random selection and calculate MICS Indicators 8.3, the household sample weight is multiplied by the total number of children in the age range in each household. Therefore the unweighted base population presented in the SE tables reflects the unweighted number of households with children in the age range, whereas the weighted numbers reflect the number of children in the age range.</p>

Appendix D. Bangkok Small Community MICS 2016 Indicators: Numerators and Denominators

MICS 5 INDICATOR [M]		Module 4		Numerator		Denominator		SDG Indicator Reference ⁵	
NUTRITION									
2.1a	Underweight prevalence	AN		Number of children under age 5 who fall below (a) minus two standard deviations (moderate and severe) (b) minus three standard deviations (severe) of the median weight for age of the WHO standard	Total number of children under age 5				
2.1b									
2.2a	Stunting prevalence	AN		Number of children under age 5 who fall below (a) minus two standard deviations (moderate and severe) (b) below minus three standard deviations (severe) of the median height for age of the WHO standard	Total number of children under age 5			SDG 2.2.1	
2.2b									
2.3a	Wasting prevalence	AN		Number of children under age 5 who fall below (a) minus two standard deviations (moderate and severe) (b) minus three standard deviations (severe) of the median weight for height of the WHO standard	Total number of children under age 5			SDG 2.2.2	
2.3b									
2.4	Overweight prevalence	AN		Number of children under age 5 who are above two standard deviations of the median weight for height of the WHO standard	Total number of children under age 5				
2.5	Children ever breastfed	MN		Number of women with a live birth in the last 2 years who breastfed their last live-born child at any time	Total number of women with a live birth in the last 2 years				
2.6	Early initiation of breastfeeding	MN		Number of women with a live birth in the last 2 years who put their last newborn to the breast within one hour of birth	Total number of women with a live birth in the last 2 years				
2.7	Exclusive breastfeeding under 6 months	BD		Number of infants under 6 months of age who are exclusively breastfed ⁶	Total number of infants under 6 months of age				

[M] The indicator is also calculated for men, for the same age group, in surveys where the Questionnaire for Individual Men has been included. Calculations are carried out by using modules in the Questionnaire for Individual Men

⁴ Some indicators are constructed by using questions in several modules in the MICS questionnaires. In such cases, only the module(s) which contains most of the necessary information is indicated.

⁵ Sustainable Development Goal (SDG) indicators, <http://unstats.un.org/sdgs/indicators/indicators-list/>. The Inter-agency Working Group on SDG indicators is continuously updating the metadata of many SDG indicators and changes are being made to the list of SDG indicators. MICS covers many SDG indicators with an exact match of their definitions, while some indicators are only partially covered by MICS. The latter cases are included here as long as the current international methodology allows for only the way that the MICS indicator is defined, and/or a significant part of the SDG indicator can be generated by the MICS indicator. For more information on the metadata of the SDG indicators, see <http://unstats.un.org/sdgs/metadata/>

⁶ Infants receiving breast milk, and not receiving any other fluids or foods, with the exception of oral rehydration solution, vitamins, mineral supplements and medicines

MICS 5 INDICATOR [M]		Module 4		Numerator		Denominator		SDG Indicator Reference 5
2.8	Predominant breastfeeding under 6 months	BD		Number of infants under 6 months of age who received breast milk as the predominant source of nourishment ⁷ during the previous day	Total number of infants under 6 months of age			
2.9	Continued breastfeeding at 1 year	BD		Number of children age 12-15 months who received breast milk during the previous day	Total number of children age 12-15 months			
2.10	Continued breastfeeding at 2 years	BD		Number of children age 20-23 months who received breast milk during the previous day	Total number of children age 20-23 months			
2.11	Duration of breastfeeding	BD		The age in months when 50 per cent of children age 0-35 months did not receive breast milk during the previous day				
2.12	Age-appropriate breastfeeding	BD		Number of children age 0-23 months appropriately fed ⁸ during the previous day	Total number of children age 0-23 months			
2.13	Introduction of solid, semi-solid or soft foods	BD		Number of infants age 6-8 months who received solid, semi-solid or soft foods during the previous day	Total number of infants age 6-8 months			
2.14	Milk feeding frequency for non-breastfed children	BD		Number of non-breastfed children age 6-23 months who received at least 2 milk feedings during the previous day	Total number of non-breastfed children age 6-23 months			
2.15	Minimum meal frequency	BD		Number of children age 6-23 months who received solid, semi-solid and soft foods (plus milk feeds for non-breastfed children) the minimum number of times ⁹ or more during the previous day	Total number of children age 6-23 months			
2.16	Minimum dietary diversity	BD		Number of children age 6-23 months who received foods from 4 or more food groups ¹⁰ during the previous day	Total number of children age 6-23 months			
2.17a	Minimum acceptable diet	BD		(a) Number of breastfed children age 6-23 months who had at least the minimum dietary diversity and the minimum meal frequency during the previous day	(a) Number of breastfed children age 6-23 months			
2.17b				(b) Number of non-breastfed children age 6-23 months who received at least 2 milk feedings and had at least the minimum dietary diversity not including milk feeds and the minimum meal frequency during the previous day	(b) Number of non-breastfed children age 6-23 months			

⁷ Infants who receive breast milk and certain fluids (water and water-based drinks, fruit juice, ritual fluids, oral rehydration solution, drops, vitamins, minerals, and medicines), but do not receive anything else (in particular, non-human milk and food-based fluids)

⁸ Infants age 0-5 months who are exclusively breastfed, and children age 6-23 months who are breastfed and ate solid, semi-solid or soft foods

⁹ Breastfeeding children: solid, semi-solid or soft foods, two times for infants age 6-8 months, and three times for children 9-23 months; non-breastfeeding children: Solid, semi-solid, or soft foods, or milk feeds, four times for children age 6-23 months

¹⁰ The indicator is based on consumption of any amount of food from at least four out of the seven following food groups: 1) grains, roots and tubers, 2) legumes and nuts, 3) dairy products (milk, yoghurt, cheese), 4) flesh foods (meat, fish, poultry and liver/organ meats), 5) eggs, 6) vitamin-A rich fruits and vegetables, and 7) other fruits and vegetables

MICS 5 INDICATOR [W]	Module ⁴	Numerator	Denominator	SDG Indicator Reference ⁵
2.18	BD	Number of children age 0-23 months who were fed with a bottle during the previous day	Total number of children age 0-23 months	
2.19	SI	Number of households with salt testing 15 parts per million or more of iodide/iodate	Total number of households in which salt was tested or where there was no salt	
2.20	MN	Number of most recent live births in the last 2 years weighing below 2,500 grams at birth	Total number of most recent live births in the last 2 years	
2.S1	AN	Number of live births in the last 5 years weighing below 2,500 grams at birth	Total number of children under age 5 who had birth weight recorded on the health card	
2.21	MN	Number of most recent live births in the last 2 years who were weighed at birth	Total number of most recent live births in the last 2 years	
CHILD HEALTH				
3.1	IM	Number of children age 12-23 months who received BCG vaccine by their first birthday	Total number of children age 12-23 months	
3.2	IM	Number of children age 12-23 months who received the third dose of OPV vaccine (OPV3) by their first birthday	Total number of children age 12-23 months	
3.3	IM	Number of children age 12-23 months who received the third dose of DPT vaccine (DPT3) by their first birthday	Total number of children age 12-23 months	
3.4	IM	Number of children age 12-23 months who received measles vaccine by their first birthday	Total number of children age 12-23 months	
3.5	IM	Number of children age 12-23 months who received the third dose of Hepatitis B vaccine (HepB3) by their first birthday	Total number of children age 12-23 months	
3.8	IM	Number of children age 12-23 months who received all vaccinations recommended in the national immunization schedule by their first birthday	Total number of children age 12-23 months	SDG 3.b.1 ¹²

¹¹ In countries where measles vaccination is administered at or after 12 months of age according to the vaccination schedule, the indicator is calculated as the proportion of children age 24-35 months who received the measles vaccine by 24 months of age

¹² New SDG indicator that will be officially added to the list of SDG indicators in March 2017, as approved by the Inter-agency Group on SDG Indicators, at the 4th Meeting in Geneva: <http://unstats.un.org/sdgs/meetings/iaeg-sdgs-meeting-04>

MICS 5 INDICATOR [M]		Module ⁴	Numerator	Denominator	SDG Indicator Reference ⁵
3.9	Neonatal tetanus protection	MN	Number of women age 15-49 years with a live birth in the last 2 years who were given at least two doses of tetanus toxoid vaccine within the appropriate interval ¹³ prior to the most recent birth	Total number of women age 15-49 years with a live birth in the last 2 years	
3.10	Care-seeking for diarrhoea	CA	Number of children under age 5 with diarrhoea in the last 2 weeks for whom advice or treatment was sought from a health facility or provider	Total number of children under age 5 with diarrhoea in the last 2 weeks	
3.S1	Diarrhoea treatment with oral rehydration salts (ORS)	CA	Number of children under age 5 with diarrhoea in the last 2 weeks who received ORS	Total number of children under age 5 with diarrhoea in the last 2 weeks	
3.12	Diarrhoea treatment with oral rehydration therapy (ORT) and continued feeding	CA	Number of children under age 5 with diarrhoea in the last 2 weeks who received ORT (ORS packet, pre-packaged ORS fluid, recommended homemade fluid or increased fluids) and continued feeding during the episode of diarrhoea	Total number of children under age 5 with diarrhoea in the last 2 weeks	
3.15	Use of solid fuels for cooking	HC	Number of household members in households that use solid fuels as the primary source of domestic energy to cook	Total number of household members	
3.20	Care-seeking for fever	CA	Number of children under age 5 with fever in the last 2 weeks for whom advice or treatment was sought from a health facility or provider	Total number of children under age 5 with fever in the last 2 weeks	
WATER AND SANITATION					
4.1	Use of improved drinking water sources	WS	Number of household members using improved sources of drinking water	Total number of household members	
4.3	Use of improved sanitation	WS	Number of household members using improved sanitation facilities which are not shared	Total number of household members	SDG 1.4.1 & 6.2.1
4.4	Safe disposal of child's faeces	CA	Number of children age 0-2 years whose last stools were disposed of safely	Total number of children age 0-2 years	
4.5	Place for handwashing	HW	Number of households with a specific place for handwashing where water and soap or other cleansing agent are present	Total number of households	SDG 6.2.1
4.6	Availability of soap or other cleansing agent	HW	Number of households with soap or other cleansing agent	Total number of households	

¹³ See the MICS tabulation plan for a detailed description

MICS 5 INDICATOR ^[M]		Module ⁴	Numerator	Denominator	SDG Indicator Reference ⁵
REPRODUCTIVE HEALTH					
5.1	Adolescent birth rate ¹⁴	CM - BH	Age-specific fertility rate for women age 15-19 years		SDG 3.7.2
5.2	Early childbearing	CM - BH	Number of women age 20-24 years who had at least one live birth before age 18	Total number of women age 20-24 years	
5.3	Contraceptive prevalence rate	CP	Number of women age 15-49 years currently married or in union who are using (or whose partner is using) a (modern or traditional) contraceptive method	Total number of women age 15-49 years who are currently married or in union	
5.4	Unmet need ¹⁵	UN	Number of women age 15-49 years who are currently married or in union who are fecund and want to space their births or limit the number of children they have and who are not currently using contraception	Total number of women age 15-49 years who are currently married or in union	
5.5a 5.5b	Antenatal care coverage	MN	Number of women age 15-49 years with a live birth in the last 2 years who were attended during their last pregnancy that led to a live birth (a) at least once by skilled health personnel (b) at least four times by any provider	Total number of women age 15-49 years with a live birth in the last 2 years	
5.6	Content of antenatal care	MN	Number of women age 15-49 years with a live birth in the last 2 years who had their blood pressure measured and gave urine and blood samples during the last pregnancy that led to a live birth	Total number of women age 15-49 years with a live birth in the last 2 years	
5.S1	STI (VDRL 1 st) screening during antenatal care	MN	Number of women age 15-49 years with a live birth in the last 2 years who were tested for STIs (VDRL 1 st) with the results written in the health book	Total number of women age 15-49 years with a live birth in the last 2 years	
5.S2	STI (VDRL 2 nd) screening during antenatal care	MN	Number of women age 15-49 years with a live birth in the last 2 years who were tested for STIs (VDRL 2 nd) with the results written in the health book	Total number of women age 15-49 years with a live birth in the last 2 years	
5.S3	Thalassemia screening during antenatal care	MN	Number of women age 15-49 years with a live birth in the last 2 years who were tested for thalassemia with the results written in the health book	Total number of women age 15-49 years with a live birth in the last 2 years	

¹⁴ When the Birth History module is used, the indicator is calculated for the last 3-year period. When estimated using the Fertility module only, the rate refers to the last one year

¹⁵ See the MICS tabulation plan for a detailed description

MICS 5 INDICATOR [M]		Module ⁴	Numerator	Denominator	SDG Indicator Reference ⁵
5.S4	Thalassemia screening for husband	MN	Number of women age 15-49 years with a live birth in the last 2 years whose husbands were tested for thalassemia and results are written in the health book	Total number of women age 15-49 years with a live birth in the last 2 years	
5.7	Skilled attendant at delivery	MN	Number of women age 15-49 years with a live birth in the last 2 years who were attended by skilled health personnel during their most recent live birth	Total number of women age 15-49 years with a live birth in the last 2 years	SDG 3.1.2
5.8	Institutional deliveries	MN	Number of women age 15-49 years with a live birth in the last 2 years whose most recent live birth was delivered in a health facility	Total number of women age 15-49 years with a live birth in the last 2 years	
5.9	Caesarean section	MN	Number of women age 15-49 years whose most recent live birth in the last 2 years was delivered by caesarean section	Total number of women age 15-49 years with a live birth in the last 2 years	
5.S5	Post-natal health check	MN	Number of women age 15-49 years with a live birth in the last 2 years who had at least three post-natal health checks within 42 days of delivery.	Total number of women age 15-49 years with a live birth in the last 2 years	
CHILD DEVELOPMENT					
6.1	Attendance in early childhood education	EC	Number of children age 36-59 months who are attending an early childhood education programme	Total number of children age 36-59 months	
6.2	Support for learning	EC	Number of children age 36-59 months with whom an adult has engaged in four or more activities to promote learning and school readiness in the last 3 days	Total number of children age 36-59 months	
6.3	Father's support for learning	EC	Number of children age 36-59 months whose biological father has engaged in four or more activities to promote learning and school readiness in the last 3 days	Total number of children age 36-59 months	
6.4	Mother's support for learning	EC	Number of children age 36-59 months whose biological mother has engaged in four or more activities to promote learning and school readiness in the last 3 days	Total number of children age 36-59 months	
6.5	Availability of children's books	EC	Number of children under age 5 who have three or more children's books	Total number of children under age 5	
6.6	Availability of playthings	EC	Number of children under age 5 who play with two or more types of playthings	Total number of children under age 5	
6.S1	Availability of playthings (mobile phones, tablets and game players)		Number of children under age 5 who play with mobile phones, tablets or game players	Total number of children under age 5	

MICS 5 INDICATOR [M]		Module 4	Numerator	Denominator	SDG Indicator Reference 5
6.7	Inadequate care	EC	Number of children under age 5 left alone or in the care of another child younger than 10 years of age for more than one hour at least once in the last week	Total number of children under age 5	
6.8	Early child development index	EC	Number of children age 36-59 months who are developmentally on track in at least three of the following four domains: literacy-numeracy, physical, social-emotional, and learning	Total number of children age 36-59 months	SDG 4.2.1
LITERACY AND EDUCATION					
7.1	Literacy rate among young women [M]	WB	Number of women age 15-24 years who are able to read a short simple statement about everyday life or who attended secondary or higher education	Total number of women age 15-24 years	
7.2	School readiness	ED	Number of children in first grade of primary school who attended preschool during the previous school year	Total number of children attending the first grade of primary school	
7.3	Net intake rate in primary education	ED	Number of children of school-entry age who enter the first grade of primary school	Total number of children of school-entry age	
7.4	Primary school net attendance ratio (adjusted)	ED	Number of children of primary school age currently attending primary or secondary school	Total number of children of primary school age	
7.5	Secondary school net attendance ratio (adjusted)	ED	Number of children of secondary school age currently attending secondary school or higher	Total number of children of secondary school age	
7.6	Children reaching last grade of primary	ED	Proportion of children entering the first grade of primary school who eventually reach last grade		
7.7	Primary completion rate	ED	Number of children attending the last grade of primary school (excluding repeaters)	Total number of children of primary school completion age (age appropriate to final grade of primary school)	
7.8	Transition rate to secondary school	ED	Number of children attending the last grade of primary school during the previous school year who are in the first grade of secondary school during the current school year	Total number of children attending the last grade of primary school during the previous school year	
7.9	Gender parity index (primary school)	ED	Primary school net attendance ratio (adjusted) for girls	Primary school net attendance ratio (adjusted) for boys	SDG 4.5.1
7.10	Gender parity index (secondary school)	ED	Secondary school net attendance ratio (adjusted) for girls	Secondary school net attendance ratio (adjusted) for boys	SDG 4.5.1

MICS 5 INDICATOR ^[M]		Module ⁴	Numerator	Denominator	SDG Indicator Reference ⁵
CHILD PROTECTION					
8.1	Birth registration	BR	Number of children under age 5 whose births are reported registered	Total number of children under age 5	SDG 16.9.1
8.3	Violent discipline	CD	Number of children age 1-14 years who experienced psychological aggression or physical punishment during the last one month	Total number of children age 1-14 years	SDG 16.2.1
8.4	Marriage before age 15 ^[M]	MA	Number of women age 15-49 years who were first married or in union before age 15	Total number of women age 15-49 years	
8.5	Marriage before age 18 ^[M]	MA	Number of women age 20-49 years who were first married or in union before age 18	Total number of women age 20-49 years	
8.6	Young women age 15-19 years currently married or in union ^[M]	MA	Number of women age 15-19 years who are married or in union	Total number of women age 15-19 years	
8.7	Polygyny ^[M]	MA	Number of women age 15-49 years who are in a polygynous union	Total number of women age 15-49 years who are married or in union	
8.8a 8.8b	Spousal age difference	MA	Number of women who are married or in union and whose spouse is 10 or more years older, (a) among women age 15-19 years, (b) among women age 20-24 years	Total number of women who are married or in union (a) age 15-19 years, (b) age 20-24 years	
8.12	Attitudes towards domestic violence ^[M]	DV	Number of women who state that a husband is justified in hitting or beating his wife in at least one of the following circumstances: (1) she goes out without telling him, (2) she neglects the children, (3) she argues with him, (4) she refuses sex with him, (5) she burns the food	Total number of women age 15-49 years	
8.13	Children's living arrangements	HL	Number of children age 0-17 years living with neither biological parent	Total number of children age 0-17 years	
8.14	Prevalence of children with one or both parents dead	HL	Number of children age 0-17 years with one or both biological parents dead	Total number of children age 0-17 years	
8.15	Children with at least one parent living abroad	HL	Number of children 0-17 years with at least one biological parent living abroad	Total number of children 0-17 years	

MICS 5 INDICATOR [M]	Module 4	Numerator	Denominator	SDG Indicator Reference 5
HIV/AIDS				
9.1	HA	Number of women age 15-24 years who correctly identify ways of preventing the sexual transmission of HIV ¹⁶ , and who reject major misconceptions about HIV transmission	Total number of women age 15-24 years	
9.2	HA	Number of women age 15-49 years who correctly identify all three means ¹⁷ of mother-to-child transmission of HIV	Total number of women age 15-49 years	
9.3	HA	Number of women age 15-49 years expressing accepting attitudes on all four questions ¹⁸ toward people living with HIV	Total number of women age 15-49 years who have heard of HIV	
9.4	HA	Number of women age 15-49 years who state knowledge of a place to be tested for HIV	Total number of women age 15-49 years	
9.5	HA	Number of women age 15-49 years who have been tested for HIV in the last 12 months and who know their results	Total number of women age 15-49 years	
9.7	HA	Number of women age 15-49 years who had a live birth in the last 2 years and received antenatal care during the pregnancy of their most recent birth, reporting that they received counselling on HIV during antenatal care	Total number of women age 15-49 years who had a live birth in the last 2 years	
9.8	HA	Number of women age 15-49 years who had a live birth in the last 2 years and received antenatal care during the pregnancy of their most recent birth, reporting that they were offered and accepted an HIV test during antenatal care and received their results	Total number of women age 15-49 years who had a live birth in the last 2 years	

¹⁶ Using condoms and limiting sex to one faithful, uninfected partner

¹⁷ Transmission during pregnancy, during delivery, and by breastfeeding

¹⁸ Women (1) who think that a female teacher with the AIDS virus should be allowed to teach in school, (2) who would buy fresh vegetables from a shopkeeper or vendor who has the AIDS virus, (3) who would not want to keep it as a secret if a family member became infected with the AIDS virus, and (4) who would be willing to care for a family member who became sick with the AIDS virus

Appendix E. Data Quality Tables

Table DQ.1: Age distribution of household population									
Single-year age distribution of household population by sex, Bangkok Small Community MICS, 2016									
	Males		Females		Age	Males		Females	
	Number	Per cent	Number	Per cent		Number	Per cent	Number	Per cent
Age					Age				
0	48	1.1	50	1.1	45	60	1.4	83	1.8

HOUSEHOLD QUESTIONNAIRE

Situation of women and children in Thailand, 2558

HOUSEHOLD INFORMATION PANEL		HH
HH1. Cluster number: _____	HH2. Household number: _____	
HH3. Interviewer's name and number: Name _____	HH4. Supervisor's name and number: Name _____	
HH5. Day / Month / Year of interview: _____ / _____ / 2 5 5 _	HH7. REGION: BANGKOK..... 1 CENTRAL..... 2 NORTH..... 3 NORTHEAST 4 SOUTH..... 5	
HH6. AREA: Urban 1 Rural 2		
HH7A. PROVINCE..... _____		
<p>WE ARE FROM NATIONAL STATISTICAL OFFICE. WE ARE CONDUCTING A SURVEY ABOUT THE SITUATION OF CHILDREN, FAMILIES AND HOUSEHOLDS. I WOULD LIKE TO TALK TO YOU ABOUT THESE SUBJECTS. THE INTERVIEW WILL TAKE ABOUT 20. MINUTES. ALL THE INFORMATION WE OBTAIN WILL REMAIN STRICTLY CONFIDENTIAL AND ANONYMOUS. MAY I START NOW?</p> <p><input type="checkbox"/> Yes, permission is given ⇒ Go to HH18 to record the time and then begin the interview.</p> <p><input type="checkbox"/> No, permission is not given ⇒ Circle 04 in HH9. Discuss this result with your supervisor.</p>		
HH9. Result of household interview: Completed 01 No household member or no competent respondent at home at time of visit..... 02 Entire household absent for extended period of time 03 Refused..... 04 Dwelling vacant / Address not a dwelling 05 Dwelling destroyed 06 Dwelling not found 07 Other (<i>specify</i>) _____ 96		

After the household questionnaire has been completed, fill in the following information:

HH10. Respondent to Household Questionnaire:

Name _____

HH11. Total number of household members: _____

HH12. Number of women age 15-49 years: _____

HH13A. Number of men age 15-49 years: _____

HH14. Number of children under age 5: _____

After all questionnaires for the household have been completed, fill in the following information:

HH13. Number of women's questionnaires completed: _____

HH13B. Number of men's questionnaires completed: _____

HH15. Number of under-5 questionnaires completed: _____

<p>HH18. Record the time.</p> <p>Hour — —</p> <p>Minutes — —</p>	<p>HL</p>
<p>LIST OF HOUSEHOLD MEMBERS</p> <p>FIRST, PLEASE TELL ME THE NAME OF EACH PERSON WHO USUALLY LIVES HERE, STARTING WITH THE HEAD OF THE HOUSEHOLD. <i>List the head of the household in line 01. List all household members (HL2), their relationship to the household head (HL3), and their sex (HL4)</i> Then ask: ARE THERE ANY OTHERS WHO LIVE HERE, EVEN IF THEY ARE NOT AT HOME NOW? <i>If yes, complete listing for questions HL2-HL4. Then, ask questions starting with HL5 for each person at a time.</i> <i>Use an additional questionnaire if all rows in the List of Household Members have been used.</i></p>

Tick here if additional questionnaire used

Probe for additional household members.

Probe especially for any infants or small children not listed, and others who may not be members of the family (such as servants, friends) but who usually live in the household.
Insert names of additional members in the household list and complete form accordingly.

Now for each woman age 15-49 years, write her name and line number and other identifying information in the information panel of a separate Individual Women's Questionnaire.
For each man age 15-49 years, write his name and line number and other identifying information in the information panel of a separate Individual Man's Questionnaire.
For each child under age 5, write his/her name and line number. AND the line number of his/her mother or caretaker in the information panel of a separate Under-5 Questionnaire.
You should now have a separate questionnaire for each eligible woman, each eligible man, and each child under five in the household.

EDUCATION		For household members age 5 and above				For household members age 5-24 years

SELECTION OF ONE CHILD FOR CHILD DISCIPLINE**SL**

SL1. Check HL6 in the List of Household Members and write the total number of children age 1-14 years.

Total number —

SL2. Check the number of children age 1-14 years in SL1:

- Zero ⇒ Go to HOUSEHOLD CHARACTERISTICS module.
- One ⇒ Go to SL9 and record the rank number as '1', enter the line number, child's name and age.
- Two or more ⇒ Continue with SL2A.

SL2A. List each of the children age 1-14 years below in the order they appear in the List of Household Members. Do not include other household members outside of the age range 1-14 years. Record the line number, name, sex, and age for each child.

SL3. Rank number	SL4. Line number from HL1	SL5. Name from HL2	SL6. Sex from HL4		SL7. Age from HL6
Rank	Line	Name	M	F	Age
1	___		1	2	___ ___
2	___		1	2	___ ___
3	___		1	2	___ ___
4	___		1	2	___ ___
5	___		1	2	___ ___
6	___		1	2	___ ___
7	___		1	2	___ ___
8	___		1	2	___ ___

SL8. Check the last digit of the household number (HH2) from the cover page. This is the number of the row you should go to in the table below.

Check the total number of children age 1-14 years in SL1 above. This is the number of the column you should go to in the table below.

Find the box where the row and the column meet and circle the number that appears in the box. This is the rank number (SL3) of the selected child.

Last Digit of Household Number (from HH2)	Total Number of Eligible Children in the Household (from SL1)						
	2	3	4	5	6	7	8+
0	2	2	4	3	6	5	4
1	1	3	1	4	1	6	5
2	2	1	2	5	2	7	6
3	1	2	3	1	3	1	7
4	2	3	4	2	4	2	8
5	1	1	1	3	5	3	1
6	2	2	2	4	6	4	2
7	1	3	3	5	1	5	3
8	2	1	4	1	2	6	4
9	1	2	1	2	3	7	5

SL9. Record the rank number (SL3), line number (SL4), name (SL5) and age (SL7) of the selected child.

Rank number —

HH19. <i>Record the time.</i>	Hour and minutes ____ : ____	
--------------------------------------	------------------------------------	--

SALT IODIZATION		SI
<p>WE WOULD LIKE TO CHECK WHETHER THE SALT USED IN YOUR HOUSEHOLD IS IODIZED. MAY I HAVE A SAMPLE OF THE SALT USED TO <u>COOK MEALS</u> IN YOUR HOUSEHOLD?</p> <p><i>Once you have tested the salt, circle number that corresponds to test outcome.</i></p>		
SI1. Result of the test using iodate reagent	Not iodized - 0 PPM 1	
	More than 0 PPM & less than 15 PPM 2	2⇒HH20
	15 PPM or more..... 3	3⇒HH20
	No salt in the house 4	4⇒HH20
	Salt not tested (specify reason) _____ 5	5⇒HH20
SI2. Result of the test using iodide reagent	Not iodized - 0 PPM 1	
	More than 0 PPM & less than 15 PPM 2	
	15 PPM or more..... 3	

HH20. *Thank the respondent for his/her cooperation and check the List of Household Members:*

A separate QUESTIONNAIRE FOR INDIVIDUAL WOMEN has been issued for each woman age 15-49 years in the List of Household Members (HL7).

A separate Questionnaire for Individual Men has been issued for each man age 15-49 years in the List of Household Members (HL7A).

A separate QUESTIONNAIRE FOR CHILDREN UNDER FIVE has been issued for each child under age 5 years in the List of Household Members (HL7B).

Return to the cover page and make sure that the result of the household interview (HH9), the name and line number of the respondent to the household questionnaire (HH10), and the number of eligible women (HH12), men (HH13A), and under-5s (HH14) are entered.

Make arrangements for the administration of the remaining questionnaire(s) in this household.

[E] WHITE POTATOES, WHITE YAMS, MANIOC, CASSAVA, OR ANY OTHER FOODS MADE FROM ROOTS?	White potatoes, white yams, manioc, cassava, etc.	1	2	8
[F] ANY DARK GREEN, LEAFY VEGETABLES?	Dark green, leafy vegetables	1	2	8
[G] RIPE MANGOES, PAPAYAS, THAI MELON, CANTALOUPE, AND MELON?	Ripe mangoes, papayas, Thai melon, etc.	1	2	8
[H] ANY OTHER FRUITS OR VEGETABLES?	Other fruits or vegetables	1	2	8
[I] LIVER, KIDNEY, HEART OR OTHER ORGAN MEATS?	Liver, kidney, heart or other organ meats	1	2	8
[J] ANY MEAT, SUCH AS BEEF, PORK, LAMB, GOAT, CHICKEN, OR DUCK?	Meat, such as beef, pork, lamb, goat, etc.	1	2	8
[K] EGGS?	Eggs	1	2	8
[L] FRESH OR DRIED FISH OR SHELLFISH?	Fresh or dried fish	1	2	8
[M] ANY FOODS MADE FROM BEANS, PEAS, LENTILS, OR NUTS?	Foods made from beans, peas, etc.	1	2	8
[N] CHEESE OR OTHER FOOD MADE FROM MILK?	Cheese or other food made from milk	1	2	8
[O] ANY OTHER SOLID, SEMI-SOLID, OR SOFT FOOD THAT I HAVE NOT MENTIONED? (Specify) _____	Other solid, semi-solid, or soft food	1	2	8

<p>BD9. Check BD8 (Categories “A” through “O”).</p> <p><input type="checkbox"/> At least one “Yes” or all “DK” ⇒ Go to BD11.</p> <p><input type="checkbox"/> Else ⇒ Continue with BD10.</p>		
<p>BD10. Probe to determine whether the child ate any solid, semi-solid or soft foods yesterday during the day or night.</p> <p><input type="checkbox"/> The child did not eat or the respondent does not know ⇒ Go to Next Module.</p> <p><input type="checkbox"/> The child ate at least one solid, semi-solid or soft food item mentioned by the respondent ⇒ Go back to BD8 and record food eaten yesterday [A to O]. When finished, continue with BD11.</p>		
<p>BD11. HOW MANY TIMES DID (<i>name</i>) EAT ANY SOLID, SEMI-SOLID OR SOFT FOODS YESTERDAY DURING THE DAY OR NIGHT?</p> <p><i>If 7 or more times, record '7'.</i></p>	<p>Number of times —</p> <p>DK..... 8</p>	

IMMUNIZATION									IM
If an immunization (child health) card is available, copy the dates in IM3 for each type of immunization recorded on the card. IM6-IM16B will only be asked if a card is not available.									
IM1. DO YOU HAVE A CARD WHERE (<i>name</i>)'S VACCINATIONS ARE WRITTEN DOWN? <i>If yes: MAY I SEE IT PLEASE?</i>		Yes, seen 1 Yes, not seen 2 No card 3							1⇒IM3 2⇒IM6
IM2. DID YOU EVER HAVE A VACCINATION (<i>child health</i>) CARD FOR (<i>name</i>)?		Yes 1 No 2							1⇒IM6 2⇒IM6
IM3. (a) Copy dates for each vaccination from the card. (b) Write '44' in day column if card shows that vaccination was given but no date recorded.		Date of Immunization							
		Day		Month		Year			
BCG	BCG								
POLIO 1	OPV1								
POLIO 2	OPV2								
POLIO 3	OPV3								
POLIO 4	OPV4								
POLIO 5	OPV5								
DPT 1	DPT1								
DPT 2	DPT2								
DPT 3	DPT3								
DPT 4	DPT4								
DPT 5	DPT5								
HEPB AT BIRTH	HEP0								
HEPB 1	HEP1								
HEPB 2	HEP2								
HEPB 3	HEP3								
MMR 1	MMR1								
MMR 2	MMR2								
JAPE 1	JE1								
JAPE 2	JE2								
JAPE 3	JE3								

<p>IM4. Check IM3. Are all vaccines (BCG to JE3) recorded?</p> <p><input type="checkbox"/> Yes ⇒ Go to IM19.</p> <p><input type="checkbox"/> No ⇒ Continue with IM5.</p>		
<p>IM5. IN ADDITION TO WHAT IS RECORDED ON THIS CARD, DID (<i>name</i>) RECEIVE ANY OTHER VACCINATIONS – INCLUDING VACCINATIONS RECEIVED IN CAMPAIGNS OR IMMUNIZATION DAYS OR CHILD HEALTH DAYS?</p> <p><input type="checkbox"/> Yes ⇒ Go back to IM3 and probe for these vaccinations and write '66' in the corresponding day column for each vaccine mentioned. When finished, skip to IM19.</p> <p><input type="checkbox"/> No/DK ⇒ Go to IM19.</p>		
<p>IM6. HAS (<i>name</i>) EVER RECEIVED ANY VACCINATIONS TO PREVENT HIM/HER FROM GETTING DISEASES, INCLUDING VACCINATIONS RECEIVED IN A CAMPAIGN OR IMMUNIZATION DAY OR CHILD HEALTH DAY?</p>	<p>Yes 1</p> <p>No 2</p> <p>DK 8</p>	<p>2⇒IM19</p> <p>8⇒IM19</p>
<p>IM7. HAS (<i>name</i>) EVER RECEIVED A BCG VACCINATION AGAINST TUBERCULOSIS – THAT IS, AN INJECTION IN THE ARM OR SHOULDER THAT USUALLY CAUSES A SCAR?</p>	<p>Yes 1</p> <p>No 2</p> <p>DK 8</p>	
<p>IM8. HAS (<i>name</i>) EVER RECEIVED ANY VACCINATION DROPS IN THE MOUTH TO PROTECT HIM/HER FROM POLIO?</p>	<p>Yes 1</p> <p>No 2</p> <p>DK 8</p>	<p>2⇒IM11</p> <p>8⇒IM11</p>
<p>IM9. WAS THE FIRST POLIO VACCINE RECEIVED IN THE FIRST TWO WEEKS AFTER BIRTH?</p>	<p>Yes 1</p> <p>No 2</p>	
<p>IM10. HOW MANY TIMES WAS THE POLIO VACCINE RECEIVED?</p>	<p>Number of times _</p>	
<p>IM11. HAS (<i>name</i>) EVER RECEIVED A DPT VACCINATION – THAT IS, AN INJECTION IN THE THIGH TO PREVENT HIM/HER FROM GETTING TETANUS, WHOOPING COUGH, OR DIPHTHERIA?</p> <p><i>Probe by indicating that DPT vaccination is sometimes given at the same time as Polio.</i></p>	<p>Yes 1</p> <p>No 2</p> <p>DK 8</p>	<p>2⇒IM13</p> <p>8⇒IM13</p>
<p>IM12. HOW MANY TIMES WAS THE DPT VACCINE RECEIVED?</p>	<p>Number of times _</p>	

<p>IM13. HAS (<i>name</i>) EVER RECEIVED A HEPATITIS B VACCINATION – THAT IS, AN INJECTION IN THE THIGH TO PREVENT HIM/HER FROM GETTING HEPATITIS B?</p> <p><i>Probe by indicating that the Hepatitis B vaccine is sometimes given at the same time as Polio and DPT vaccines.</i></p>	<p>Yes 1</p> <p>No 2</p> <p>DK 8</p>	<p>2⇒IM16</p> <p>8⇒IM16</p>
<p>IM14. WAS THE FIRST HEPATITIS B VACCINE RECEIVED WITHIN 24 HOURS AFTER BIRTH?</p>	<p>Yes 1</p> <p>No 2</p> <p>DK 8</p>	
<p>IM15. HOW MANY TIMES WAS THE HEPATITIS B RECEIVED?</p>	<p>Number of times _</p>	
<p>IM16. HAS (<i>name</i>) EVER RECEIVED A MEASLES INJECTION (OR AN MMR OR MR) – THAT IS, A SHOT IN THE ARM AT THE AGE OF 9 MONTHS OR OLDER - TO PREVENT HIM/HER FROM GETTING MEASLES?</p>	<p>Yes 1</p> <p>No 2</p> <p>DK 8</p>	
<p>IM16A. HAS (<i>name</i>) EVER RECEIVED A JE VACCINE TO PREVENT HIM/HER FROM GETTING JAPANESE ENCEPHALITIS – THAT IS, A SHOT ON THE UPPER ARM OR THIGH?</p>	<p>Yes 1</p> <p>No 2</p> <p>DK 8</p>	<p>2⇒IM19</p> <p>8⇒IM19</p>
<p>IM16B. HOW MANY TIMES WAS A JE VACCINE RECEIVED?</p>	<p>Number of times _</p>	
<p>IM19. PLEASE TELL ME IF (<i>name</i>) HAS PARTICIPATED IN ANY OF THE FOLLOWING CAMPAIGNS:</p> <p>[A] MR CAMPAIGN FOR CHILDREN AGE 2.5 TO 7 YEARS OLD (1 MAY – 30 SEPTEMBER 2015)</p> <p>[B] POLIO CAMPAIGN FOR SPECIAL TARGET GROUP (1 JANUARY – 30 APRIL 2015)</p>	<p style="text-align: right;">Y N DK</p> <p>MR campaign 1 2 8</p> <p>Polio campaign 1 2 8</p>	

CARE OF ILLNESS		CA
<p>CA1. IN THE LAST TWO WEEKS, HAS (<i>name</i>) HAD DIARRHOEA?</p> <p>BY DIARRHEA I MEAN THE CHIDL HAD AT LEAST THREE STOOLS A DAY, OR STOOLS WITH MUCUS AND BLOOD AT LEAST ONE TIME, OR LIQUID STOOLS MORE THAN ONE TIME PER DAY?</p>	<p>Yes..... 1</p> <p>No 2</p> <p>DK..... 8</p>	<p>2⇒CA6A</p> <p>8⇒ CA6A</p>
<p>CA2. I WOULD LIKE TO KNOW HOW MUCH (<i>name</i>) WAS GIVEN TO DRINK DURING THE DIARRHOEA (INCLUDING BREASTMILK).</p> <p>DURING THE TIME (<i>name</i>) HAD DIARRHOEA, WAS HE/SHE GIVEN LESS THAN USUAL TO DRINK, ABOUT THE SAME AMOUNT, OR MORE THAN USUAL?</p> <p><i>If 'less', probe:</i></p> <p>WAS HE/SHE GIVEN MUCH LESS THAN USUAL TO DRINK, OR SOMEWHAT LESS?</p>	<p>Much less..... 1</p> <p>Somewhat less 2</p> <p>About the same..... 3</p> <p>More..... 4</p> <p>Nothing to drink..... 5</p> <p>DK..... 8</p>	
<p>CA3. DURING THE TIME (<i>name</i>) HAD DIARRHOEA, WAS HE/SHE GIVEN LESS THAN USUAL TO EAT, ABOUT THE SAME AMOUNT, MORE THAN USUAL, OR NOTHING TO EAT?</p> <p><i>If 'less', probe:</i></p> <p>WAS HE/SHE GIVEN MUCH LESS THAN USUAL TO EAT OR SOMEWHAT LESS?</p>	<p>Much less..... 1</p> <p>Somewhat less 2</p> <p>About the same..... 3</p> <p>More..... 4</p> <p>Stopped food 5</p> <p>Never gave food 6</p> <p>DK..... 8</p>	
<p>CA3A. DID YOU SEEK ANY ADVICE OR TREATMENT FOR THE DIARRHOEA FROM ANY SOURCE?</p>	<p>Yes..... 1</p> <p>No 2</p> <p>DK..... 8</p>	<p>2⇒CA4</p> <p>8⇒CA4</p>

<p>CA3B. FROM WHERE DID YOU SEEK ADVICE OR TREATMENT?</p> <p><i>Probe:</i> ANYWHERE ELSE?</p> <p>Circle all providers mentioned, but do NOT prompt with any suggestions.</p> <p>Probe to identify each type of source.</p> <p>If unable to determine if public or private sector, write the name of the place.</p> <p>_____</p> <p>(Name of place)</p>	<p>Public sector</p> <p>Government hospitalA</p> <p>Government health centre.....B</p> <p>Community health worker D</p> <p>Mobile / Outreach clinic.....E</p> <p>Other public (<i>specify</i>) _____ H</p> <p>Private medical sector</p> <p>Private hospital / clinic..... <p>CA12. AT ANY TIME DURING THE ILLNESS, WAS (<i>name</i>) GIVEN ANY MEDICINE FOR THE ILLNESS?</p>	<p>Yes 1</p> <p>No..... 2</p> <p>DK 8</p>	<p>2⇒CA14</p> <p>8⇒CA14</p>

<p>CA13. WHAT MEDICINE WAS (name) GIVEN?</p> <p><i>Probe:</i> ANY OTHER MEDICINE?</p> <p>Circle all medicines given. Write brand name(s) of all medicines mentioned.</p> <p>_____</p> <p>(Names of medicines)</p>	<p>Antibiotics:</p> <p>Pill / Syrup I</p> <p>Injection J</p> <p>Other medications:</p> <p>Paracetamol P</p> <p>Aspirin Q</p> <p>Ibuprofen R</p> <p>Other (<i>specify</i>) _____ X</p> <p>DK Z</p>
<p>CA13A. Check CA13: Antibiotic mentioned (codes I or J)?</p> <p><input type="checkbox"/> Yes ⇒ Continue with CA13B.</p> <p><input type="checkbox"/> No ⇒ Go to CA14.</p>	
<p>CA13B. WHERE DID YOU GET THE (name of medicine from CA13)?</p> <p><i>Probe to identify the type of source.</i></p> <p><i>If unable to determine whether public or private, write the name of the place.</i></p> <p>_____</p> <p>(Name of place)</p>	<p>Public sector</p> <p>Government hospital 11</p> <p>Government health centre 12</p> <p>Community health worker 14</p> <p>Mobile / Outreach clinic 15</p> <p>Other public (<i>specify</i>) _____ 16</p> <p>Private medical sector</p> <p>Private hospital / clinic 21</p> <p>Private physician 22</p> <p>Private pharmacy 23</p> <p>Mobile clinic 24</p> <p>Other private medical (<i>specify</i>) _____ 26</p> <p>Other source</p> <p>Relative / Friend 31</p> <p>Shop 32</p> <p>Traditional practitioner 33</p> <p>Already had at home 40</p> <p>Other (<i>specify</i>) _____ 96</p>
<p>CA14. Check AG2: Age of child.</p> <p><input type="checkbox"/> Child age 0, 1 or 2 ⇒ Continue with CA15.</p> <p><input type="checkbox"/> Child age 3 or 4 ⇒ Go to UF13.</p>	

CA15. THE LAST TIME (<i>name</i>) PASSED STOOLS, WHAT WAS DONE TO DISPOSE OF THE STOOLS?	Child used toilet / latrine.....	01
	Put / Rinsed into toilet or latrine	02
	Put / Rinsed into drain or ditch.....	03
	Buried	05
	Left in the open	06
	Used disposable diapers and thrown into garbage	07
	Thrown into garbage but did not use disposable diapers	08
	Other (<i>specify</i>)	96
DK	98	

UF13. Record the time.	Hour and minutes ____ : ____
-------------------------------	------------------------------------

UF14. Check List of Household Members, columns HL7B and HL15.

Is the respondent the mother or caretaker of another child age 0-4 living in this household?

Yes ⇒ Indicate to the respondent that you will need to measure the weight and height of the child later. Go to the next **QUESTIONNAIRE FOR CHILDREN UNDER FIVE** to be administered to the same respondent.

No ⇒ End the interview with this respondent by thanking her/him for her/his cooperation and tell her/him that you will need to measure the weight and height of the child before you leave the household.

Check to see if there are other woman's, man's or under-5 questionnaires to be administered in this household.

Move to another woman's or under-5 questionnaires, or start making arrangements for anthropometric measurements of all eligible children in the household.

ANTHROPOMETRY		AN
<p>After questionnaires for all children are complete, the measurer weighs and measures each child. Record weight and length/height below, taking care to record the measurements on the correct questionnaire for each child. Check the child's name and line number in the List of Household Members before recording measurements.</p>		
AN1. Measurer's name and number:	Name _____	
AN2. Result of height / length and weight measurement:	Either or both measured 1	
	Child not present..... 2	2⇒AN5
	Child or mother/caretaker refused 3	3⇒AN5
	Other (specify) _____ 6	6⇒AN5
AN3. Child's weight:	Kilograms (kg)..... ____ . ____	
	Weight not measured..... 99.9	
<p>AN3A. Was the child undressed to the minimum?</p> <p><input type="checkbox"/> Yes.</p> <p><input type="checkbox"/> No, the child could not be undressed to the minimum.</p>		
<p>AN3B. Check age of child in AG2:</p> <p><input type="checkbox"/> Child under 2 years old ⇒ Measure length (lying down).</p> <p><input type="checkbox"/> Child age 2 or more years ⇒ Measure height (standing up).</p>		
AN4. Child's length or height:	Length / Height (cm) ____ . ____	
	Length / Height not measured 999.9	⇒ AN5
AN4A. How was the child actually measured? Lying down or standing up?	Lying down..... 1	
	Standing up..... 2	
AN5. WAS (name) WEIGHED AT BIRTH?	Yes..... 1	
	No 2	2⇒ AN6
	DK 8	8⇒ AN6
AN5A. HOW MUCH DID (name) WEIGH? If a card is available, record weight from card.	From card 1 (kg) ____ . ____	
	From recall..... 2 (kg) ____ . ____	
	DK..... 99998	
<p>AN6. Is there another child in the household who is eligible for measurement?</p> <p><input type="checkbox"/> Yes ⇒ Record measurements for next child.</p> <p><input type="checkbox"/> No ⇒ Check if there are any other individual questionnaires to be completed in the household. If yes, then proceed interviewing until all eligible are interviewed.</p>

<p>MCM10. Sum answers to MCM5, MCM7, and MCM9.</p>	Sum _ _	

<p>MCM11. JUST TO MAKE SURE THAT I HAVE THIS RIGHT, YOU HAVE FATHERED IN TOTAL (<i>total number in MCM10</i>) LIVE BIRTHS DURING YOUR LIFE. IS THIS CORRECT?</p> <p><input type="checkbox"/> Yes. Check below:</p> <p style="padding-left: 40px;"><input type="checkbox"/> No live births ⇒ Go to Next Module.</p> <p style="padding-left: 40px;"><input type="checkbox"/> One or more live births ⇒ Continue with MCM11A.</p> <p><input type="checkbox"/> No ⇒ Check responses to MCMI-MCM10 and make corrections as necessary.</p>		
<p>MCM11A. DID ALL THE CHILDREN YOU HAVE FATHERED HAVE THE SAME BIOLOGICAL MOTHER?</p>	<p>Yes 1</p> <p>No 2</p>	<p>1 ⇒ MCM12</p>
<p>MCM11B. IN ALL, HOW MANY WOMEN HAVE YOU FATHERED CHILDREN WITH?</p>	<p>Number of women __ __</p>	
<p>MCM12. OF THESE (<i>total number in MCM10</i>) BIRTHS YOU HAVE FATHERED, WHEN WAS THE LAST ONE BORN (EVEN IF HE OR SHE HAS DIED)?</p> <p>Month and year must be recorded.</p>	<p>Date of last birth</p> <p>Month __ __</p> <p>Year __ __ __ __</p>	

ATTITUDES TOWARD DOMESTIC VIOLENCE		MDV		
<p>MDV1. SOMETIMES A HUSBAND IS ANNOYED OR ANGERED BY THINGS THAT HIS WIFE DOES. IN YOUR OPINION, IS A HUSBAND JUSTIFIED IN HITTING OR BEATING HIS WIFE IN THE FOLLOWING SITUATIONS:</p>				
		Yes	No	DK
[A] IF SHE GOES OUT WITHOUT TELLING HIM?	Goes out without telling	1	2	8
[B] IF SHE NEGLECTS THE CHILDREN?	Neglects children	1	2	8
[C] IF SHE ARGUES WITH HIM?	Argues with him	1	2	8
[D] IF SHE REFUSES TO HAVE SEX WITH HIM?	Refuses sex	1	2	8
[E] IF SHE BURNS THE FOOD?	Burns food	1	2	8

MARRIAGE/UNION		MMA
MMA1. ARE YOU CURRENTLY MARRIED OR LIVING TOGETHER WITH A WOMAN AS IF MARRIED?	Yes, currently married 1 Yes, living with a woman 2 No, not in union..... 3	3⇒MMA5
MMA3. DO YOU HAVE OTHER WIVES OR DO YOU LIVE WITH OTHER WOMEN AS IF MARRIED?	Yes (More than one) 1 No (Only one) 2	2⇒MMA7
MMA4. HOW MANY OTHER WIVES OR LIVE-IN PARTNERS DO YOU HAVE?	Number _ _	⇒MMA8B
MMA5. HAVE YOU EVER BEEN MARRIED OR LIVED TOGETHER WITH A WOMAN AS IF MARRIED?	Yes, formerly married 1 Yes, formerly lived with a woman 2 No 3	3⇒Next Module
MMA6. WHAT IS YOUR MARITAL STATUS NOW: ARE YOU WIDOWED, DIVORCED OR SEPARATED?	Widowed 1 Divorced..... 2 Separated 3	
MMA7. HAVE YOU BEEN MARRIED OR LIVED WITH A WOMAN ONLY ONCE OR MORE THAN ONCE?	Only once..... 1 More than once..... 2	1 ⇒MMA8A 2 ⇒MMA8B
MMA8A. IN WHAT MONTH AND YEAR DID YOU MARRY OR START LIVING WITH A WOMAN AS IF MARRIED?	Date of (first) marriage Month _ _ DK month..... 98	
MMA8B. IN WHAT MONTH AND YEAR DID YOU <u>FIRST</u> MARRY OR START LIVING WITH A WOMAN AS IF MARRIED?	Year _ _ _ _ DK year 9998	⇒Next Module
MMA9. HOW OLD WERE YOU WHEN YOU FIRST STARTED LIVING WITH YOUR (FIRST) WIFE/PARTNER?	Age in years..... _ _	

HIV/AIDS				MHA
<p>MHA1. NOW I WOULD LIKE TO TALK WITH YOU ABOUT SOMETHING ELSE.</p> <p>HAVE YOU EVER HEARD OF AN ILLNESS CALLED AIDS?</p>	<p>Yes 1</p> <p>No..... 2</p>			2⇒ MHA28
<p>MHA2. CAN PEOPLE REDUCE THEIR CHANCE OF GETTING THE AIDS VIRUS BY HAVING JUST ONE UNINFECTED SEX PARTNER WHO HAS NO OTHER SEX PARTNERS?</p>	<p>Yes 1</p> <p>No..... 2</p> <p>DK..... 8</p>			
<p>MHA3. CAN PEOPLE GET THE AIDS VIRUS BECAUSE OF WITCHCRAFT OR OTHER SUPERNATURAL MEANS?</p>	<p>Yes 1</p> <p>No..... 2</p> <p>DK..... 8</p>			
<p>MHA4. CAN PEOPLE REDUCE THEIR CHANCE OF GETTING THE AIDS VIRUS BY USING A CONDOM EVERY TIME THEY HAVE SEX?</p>	<p>Yes 1</p> <p>No..... 2</p> <p>DK..... 8</p>			
<p>MHA5. CAN PEOPLE GET THE AIDS VIRUS FROM MOSQUITO BITES?</p>	<p>Yes 1</p> <p>No..... 2</p> <p>DK..... 8</p>			
<p>MHA6. CAN PEOPLE GET THE AIDS VIRUS BY SHARING FOOD WITH A PERSON WHO HAS THE AIDS VIRUS?</p>	<p>Yes 1</p> <p>No..... 2</p> <p>DK..... 8</p>			
<p>MHA7. IS IT POSSIBLE FOR A HEALTHY-LOOKING PERSON TO HAVE THE AIDS VIRUS?</p>	<p>Yes 1</p> <p>No..... 2</p> <p>DK..... 8</p>			
<p>MHA8. CAN THE VIRUS THAT CAUSES AIDS BE TRANSMITTED FROM A MOTHER TO HER BABY:</p> <p>[A] DURING PREGNANCY?</p> <p>[B] DURING DELIVERY?</p> <p>[C] BY BREASTFEEDING?</p>		<p style="text-align: right;">Yes No DK</p> <p>During pregnancy 1 2 8</p> <p>During delivery 1 2 8</p> <p>By breastfeeding 1 2 8</p>		

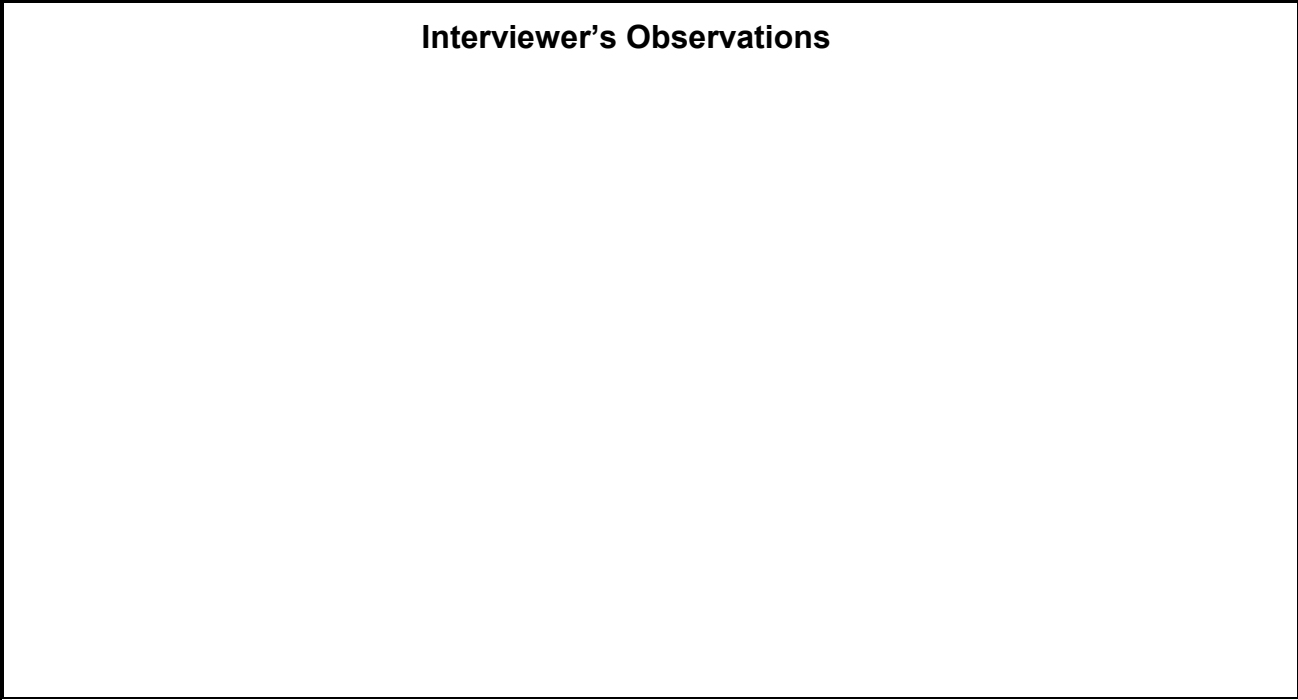

MHA9. IN YOUR OPINION, IF A FEMALE TEACHER HAS THE AIDS VIRUS BUT IS NOT SICK, SHOULD SHE BE ALLOWED TO CONTINUE TEACHING IN SCHOOL?	Yes 1 No 2 DK / Not sure / Depends 8	
MHA10. WOULD YOU BUY FRESH VEGETABLES FROM A SHOPKEEPER OR VENDOR IF YOU KNEW THAT THIS PERSON HAD THE AIDS VIRUS?	Yes 1 No 2 DK / Not sure / Depends 8	
MHA11. IF A MEMBER OF YOUR FAMILY GOT INFECTED WITH THE AIDS VIRUS, WOULD YOU WANT IT TO REMAIN A SECRET?	Yes 1 No 2 DK / Not sure / Depends 8	
MHA12. IF A MEMBER OF YOUR FAMILY BECAME SICK WITH AIDS, WOULD YOU BE WILLING TO CARE FOR HER OR HIM IN YOUR OWN HOUSEHOLD?	Yes 1 No 2 DK / Not sure / Depends 8	
MHA12A. DO YOU THINK CHILDREN LIVING WITH HIV SHOULD BE ABLE TO ATTEND SCHOOL WITH CHILDREN WHO ARE HIV NEGATIVE?	Yes 1 No 2 DK / Not sure / Depends 8	
MHA24. I DON'T WANT TO KNOW THE RESULTS, BUT HAVE YOU EVER BEEN TESTED TO SEE IF YOU HAVE THE AIDS VIRUS?	Yes 1 No 2	2⇒MHA27
MHA25. WHEN WAS THE MOST RECENT TIME YOU WERE TESTED?	Less than 12 months ago 1 12-23 months ago 2 2 or more years ago 3	
MHA26. I DON'T WANT TO KNOW THE RESULTS, BUT DID YOU GET THE RESULTS OF THE TEST?	Yes 1 No 2 DK 8	1⇒MHA28 2⇒MHA28 8⇒MHA28
MHA27. DO YOU KNOW OF A PLACE WHERE PEOPLE CAN GO TO GET TESTED FOR THE AIDS VIRUS?	Yes 1 No 2	

MHA28. CHECK AGE IS BETWEEN 15-24 (MWB2=15-24) AND EVER ATTENDED SCHOOL (MWB3=1)		
<input type="checkbox"/> YES => CONTINUE WITH MHA29 <input type="checkbox"/> NO => SKIP TO MWM11		
MHA29. "DID YOU STUDY SEXUALITY EDUCATION IN SCHOOL?" "SEXUALITY EDUCATION ON TOPICS SUCH AS BIRTH CONTROL, SAFE SEX, TEEN PREGNANCY, REPRODUCTIVE TRACT INFECTIONS AND GOOD HEALTH"	Yes 1 No 2	2⇒MWM11
MHA30. "WHAT LEVEL DID YOU FIRST HAVE SEXUALITY EDUCATION?"	Primary 1 Lower Secondary 2 Upper Secondary 3 Vocational 4 Diploma 5 DK/Unsure 8	

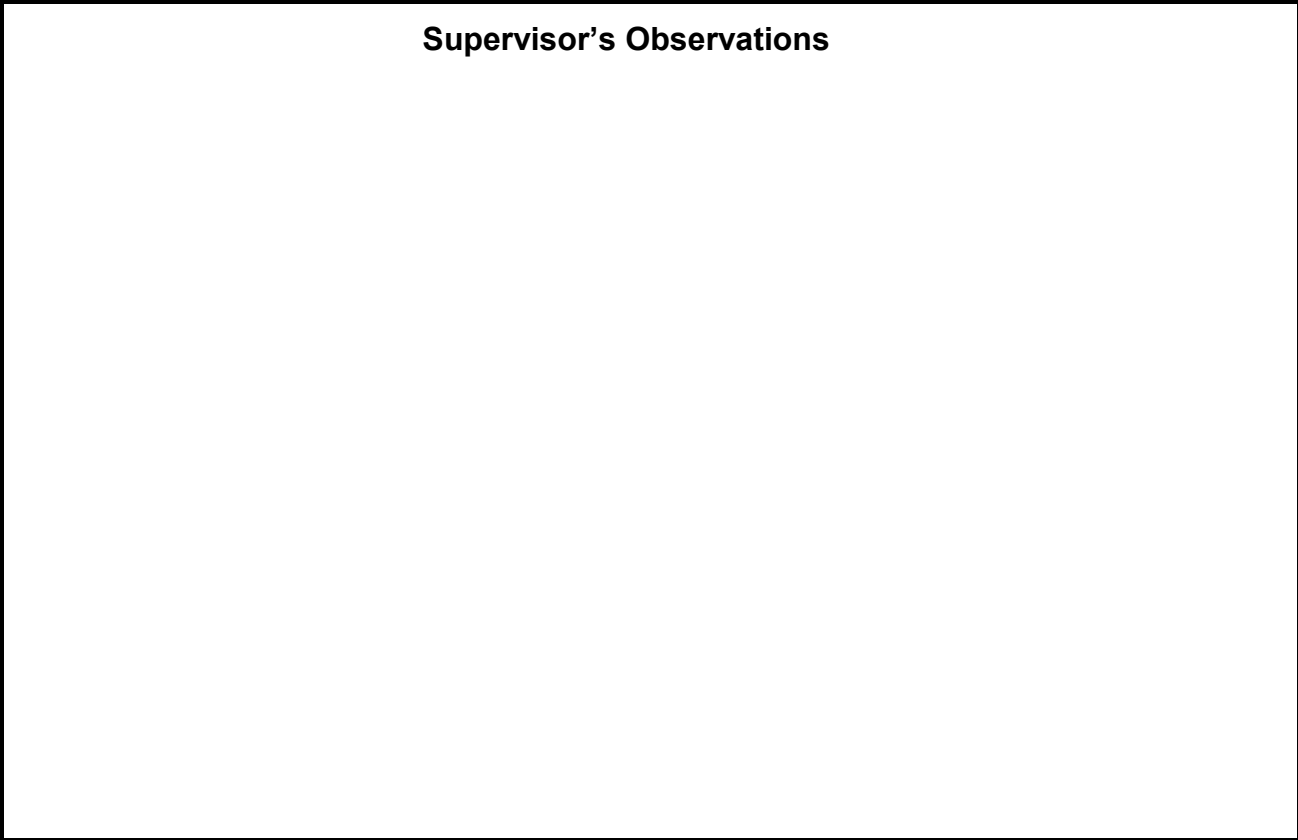

MWM11. Record the time.	Hour and minutes..... ____ : ____	
--------------------------------	-----------------------------------	--

<p>MWM12. Check List of Household Members, columns HL7B and HL15:</p> <p><i>Is the respondent the caretaker of any child age 0-4 living in this household?</i></p> <p><input type="checkbox"/> Yes ⇒ Proceed to complete the result of man's interview (MWM7) on the cover page and then go to <i>QUESTIONNAIRE FOR CHILDREN UNDER FIVE</i> for that child and start the interview with this respondent.</p> <p><input type="checkbox"/> No ⇒ End the interview with this respondent by thanking him for his cooperation and proceed to complete the result of man's interview (MWM7) on the cover page.</p>

Interviewer's Observations

Supervisor's Observations

Appendix G List of Definitions

1) Collective Household

Any household comprising one person or more, who live together in a house or residence and take part in providing or consuming food and necessities for living. These individuals may or may not be related.

2) Age

Age in years as of the individual's last birthday before the interview

3) Education

Learning that has taken place in the formal education system at all levels: pre-school, primary, lower secondary and upper secondary; academic and vocational; university, which includes open universities such as Ramkhamhaeng University; and distant learning universities such as Sukhothai Thammathirat University, where teaching takes place through various media and class attendance is not required. These educational facilities are managed either by the Government or the private sector. On completion of the programme, graduates of formal education receive certificates, diplomas or degrees, which they can use in application for further study at any relevant higher level provided in the system. Formal education excludes short-term vocational training programmes, such as hairdressing, dressmaking, driving, radio repairing, typing, and so on, which do not involve learning of any academic subjects. However, a non-formal education programme whose degree is equivalent to formal education is included.

4) No Education (or None)

Never attended school or received any education.

5) Levels of Education

Education is classified into four levels as follows:

5.1 Pre-school Level – child education programmes to prepare children for school before they start primary school, which is compulsory. Programmes include two to three years of kindergarten or one year of pre-school.

5.2 Primary Level – Compulsory basic education of knowledge and skills over six years, from Prathom (Por.) 1-6 (formerly Por.1-7 or Por. 1-4 plus Mattayom (Mor.) 1-3).

5.3 Secondary Level – Education continued from primary that is divided into two levels of three years each: lower and upper secondary.

5.3.1 Lower Secondary Level – currently three years, Mor. 1-3 (formerly Mattayomsuksa (MorSor.) 1-3, or Mor. 4-6), including other educational programmes equivalent to lower secondary level, such as the three-year basic classical dance programme. Lower secondary education is geared towards developing students' ethics, knowledge and abilities. It allows students to explore their needs, areas of interest and aptitudes.

5.3.2 Upper Secondary Level – Divided into two fields:

- a) Academic Field – currently three years, Mor. 4-6 (formerly MorSor. 4-5, or Mor. 7-8), including other educational programmes equivalent to upper secondary level in academic fields such as non-formal education (KorSorNor.) Level 5, or two years of Military Cadet School.
- b) Formal Vocational and Technical Field – A three-year educational programme leading to a lower certificate of vocational education (PorWorChor.) and a three-year intermediate Thai classical dance programme, including other educational programmes equivalent to the upper secondary level of formal vocational education, such as the military machinist programme (three years), railway engineering (five years), artisan skills (two years at Phradabot Foundation), and a former certificate of education (PorKorSor.) programme.

5.4 Higher Level – Academic education in colleges or universities leading to diplomas and degrees (bachelor, master and philosophy/doctoral) and special programme education leading to certificates from a university, college, military academy, police academy, or other institutions of higher-level education leading to a diploma or vocational associate degree (PorWorSor.), technical vocational certificate (PorWorThor.), and higher certificate of education (PorKorSor. Soong), including the advance Thai classical dance programme.

Note: Educational programmes that are not comparable to any of the above mentioned formal education levels are considered Other Levels of Education.

6) Academic Year

A period of the academic calendar running from the first day of school until end-of-year examinations. For the MICS, it was from May 2015 to February 2016 for students of upper secondary level and below, and June 2015 to March 2016 for students of higher education.

7) Marriage

A commitment between a man and a woman living together as husband and wife, with or without legal registration.

8) Live birth

Live-born children regardless of the survival period, excluding step-children, adopted children and fetal deaths.

9) Contraception

A regimen of one or more actions, devices or medications followed in order to deliberately prevent or reduce the likelihood of a woman becoming pregnant. There are many contraceptive methods, including contraceptive pills, injections, implants, IUD (intrauterine device), condoms, female sterilization, male sterilization and safety period (calendar method).

10) Underweight

Underweight is a measure of both acute and chronic malnutrition. Children whose weight-for-age is more than two standard deviations below the median of the reference population are considered moderately or severely underweight while those whose weight-for-age is more than three standard deviations below the median are classified as severely underweight.

11) Stunting

Stunting is a reflection of chronic malnutrition obtained from comparisons of children's height-for-age with a standard deviation of reference. Children whose height-for-age is more than two standard deviations below the median of the reference population are considered short for their age and are classified as moderately or severely stunted. Stunting is a result of failure to receive adequate nutrition over a long period and recurrent or chronic illness.

12) Wasting

Wasting is usually the result of a recent nutritional deficiency. Children whose weight-for-height is more than two standard deviations below the median of the reference population are classified as moderately or severely wasted. The indicator may exhibit significant seasonal shifts associated with changes in the availability of food or disease prevalence.

Children whose weight-for-height is more than two standard deviations above the median reference population are classified as moderately or severely overweight.

13) Exclusive Breastfeeding

Infants received only breast milk and vitamins, mineral supplements or medicine in the day prior to the interview.

14) Ministry of Health's Tetanus Immunization Coverage in Pregnant Women

- For pregnant women who have never received any tetanus vaccine, they should receive at least three doses. The first dose should be given at their first antenatal care visit. The second dose should be given one month after the first dose, and the third dose six months after the first dose. Later, one booster dose should be given every 10 years.

- For women who have already received one dose of tetanus vaccine, they should receive two more doses at zero and six-month intervals. If the women have already received two doses of the vaccine, they should receive one more dose at least six months after the second dose. Later, one booster dose should be given every 10 years.

15) Ministry of Health's Vaccination Schedule for Children Aged Under Five

Age	Vaccine Provision
Newborn	Vaccination against tuberculosis (BCG) Vaccination against hepatitis B (HEPB0)
2 months	Combined vaccination against diphtheria, pertussis, and tetanus, 1st dose (DPT1); and oral polio vaccine, 1st dose (OPV1)
4 months	Vaccination against hepatitis B, 1st dose (HEPB1) Combined vaccination against diphtheria, pertussis, and tetanus, 2nd dose (DPT2); and oral polio vaccine, 2nd dose (OPV2) Vaccination against hepatitis B, 2nd dose (HEPB2)
6 months	Combined vaccination against diphtheria, pertussis, and tetanus, 3rd dose (DPT3); and oral polio vaccine, 3rd dose (OPV3) Vaccination against hepatitis B, 3rd dose (HEPB3)
9 months	Vaccination against, measles, mumps and rubella or German measles, 1 st dose (MMR1)
1.5 years	Combined vaccination against diphtheria, pertussis, and tetanus, 4th dose (DPT4); and oral polio vaccine, 4th dose (OPV4) Vaccination against Japanese encephalitis, 1st dose (JE1)
1 month after JE1	Vaccination against Japanese encephalitis, 2nd dose (JE2)
2.5 years	Vaccination against Japanese encephalitis, 3rd dose (JE3) Vaccination against, measles, mumps and rubella or German measles, 2 nd dose (MMR2) (since 2015, according to the new schedule)
4 years	Combined vaccination against diphtheria, pertussis, and tetanus, 5th dose (DPT5); and oral polio vaccine, 5th dose (OPV5)

16) Flush/Pour Flush Toilets Connected to Piped Sewer System

Flush/pour flush toilets with treatment system and treated water overflowing to sewage system without having to empty the content. A piped sewer system is a system of sewer pipes, also called sewerage, that is designed to collect human excreta (faeces and urine) and wastewater and remove them from the household environment. Sewerage systems consist of facilities for collection, pumping, treating and disposing of human excreta and wastewater.

17) Flush/Pour Flush Toilets Connected to Septic Tank

Flush/pour flush toilets that keep all excreta disposal in a septic tank without overflow system for water or solid waste. When the tank is full, it needs to be emptied by suction truck. The tank may be located inside or outside the house. This type of toilet is mostly found in houses.

18) Flush/Pour Flush Toilets Connected to Pit Latrines

A flush/pour flush to pit latrine refers to a system that flushes excreta to a hole in the ground and has a water seal.

19) Piped Water

Piped water is defined as water service connected by pipe, with or without sterilization

20) Wealth Index Quintiles

Important indicators for measurement of factors related to accumulated household living standards

- Ownership of certain types of household assets, such as refrigerator, television, car, truck, bicycle, motorcycle, and so on.
- Materials used in household construction, such as wood, bricks, rocks, cement, and so on.
- Having electricity in the household
- Access to drinking water and water for general usage
- Improved sanitation facilities

Wealth index quintiles are calculated by a statistical method called Analysis of Principal Factors, where households are grouped together in a continuum of comparative wealth. The values are particularly valuable for countries that lack reliable data on incomes and expenses, which were formerly used for measurement of wealth.

Wealth index quintiles can be used to analyse economic inequalities in access to important health services and outcomes, such as childhood illness and fatality. In addition, the wealth index quintiles can enable the government to assess whether poor population groups have access to public health services, immunization, education and other important programmes.

Wealth index quintiles enable the analysis of multi-variable data from population and health surveys to be more comprehensive and to identify the extent of the impact of a household's economic status on health outcomes.

Caution: The Thailand MICS wealth index quintiles can be used for comparisons with international MICS results only and not with any other surveys since they were created specifically for the analysis of MICS data only.
